Press Advisory

Bentley Systems and Siemens to Present New Power Planning Software Applications at DistribuTECH 2018

What:
Bentley Systems and Siemens will present new applications for power utilities and industrial power facilities as part of their partnership with the Siemens Energy Management Division at DistribuTECH 2018 in San Antonio. These newly released applications will aid users by enhancing Bentley's OpenUtilities network management, design, and operations applications with new integrated analysis, design optimization, and distributed energy resource (DER) decision support capabilities enabled by Siemens' PSS SINCAL, helping to reduce costs, improve reliability, and build in resilience in response to global marketplace changes.

Who:
Bentley and Siemens representatives will be onsite to discuss these applications and other upcoming alliance initiatives:

- Michael Schneider, Global Head of Siemens Power Technologies International
- Joseph Canterino, U.S. Software Business Lead, Siemens Power Technologies International
- Vonnie Smith, Vice President, Utilities, Bentley
- Ton de Vries, Director, Business Development, Utilities, Bentley

Where:
Henry B. Gonzalez Convention Center
San Antonio, Texas
Booth #2253

When:
Tuesday, January 23, 2018 - Thursday, January 25, 2018

DistribuTECH, San Diego, USA, January 31 to February 2, 2017

Siemens and Bentley agree to jointly offer planning and design solutions for utilities

- **Joint solutions will accelerate digitalization for planning, design and operations for power utilities and industrial power customers**

Building on the strategic alliance between Siemens and Bentley Systems, that was made public in November, 2016, Siemens' Energy Management Division and Bentley Systems have announced an agreement to jointly develop solutions to accelerate digitalization of planning, design and operations for power utilities and industrial power customers. Bentley Systems is a global leader in software solutions for advancing the design, construction, and operations of infrastructure. The first of the new offerings will integrate Bentley System's utility design and geographic information systems (GIS) capabilities with Siemens' Power System Simulation (PSS) Suite, with specific solutions for power transmission, power distribution and industrial facilities. Combining these two platforms provides customers with Bentley's expertise in 3D infrastructure asset modelling and GIS with Siemens' knowledge and renowned experience in energy system planning and simulation.

"The energy industry trend toward decentralization represents a significant challenge as well as a great opportunity for power producers and consumers alike and our strategic alliance with Bentley Systems will help our customers better leverage this changing landscape through the combination of our powerful solutions," said Ralf Christian, CEO of Siemens' Energy Management Division.
