

OpenRoads Designer Volumetrics & Quantities

Quantities from the Model

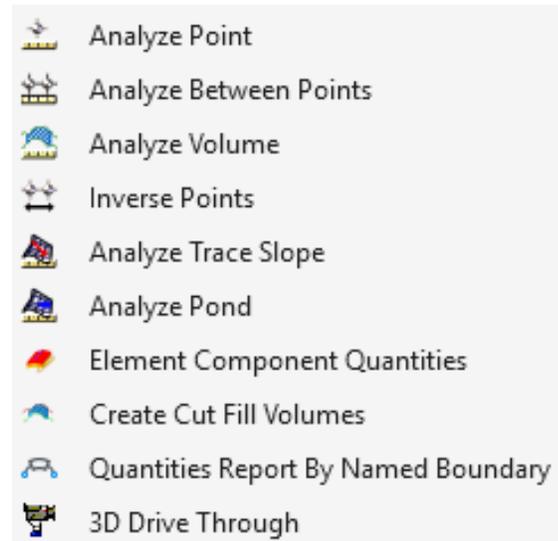

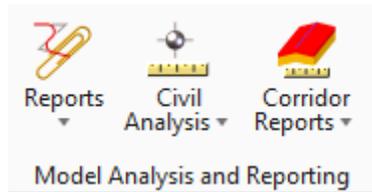

- One of the goals of OpenRoads Designer was to provide the capability to produce quantities **directly from the model using a true prismatic method.**
- At the same time, we wanted to give users the ability to control how those quantities are reported (*e.g. Eastbound vs. Westbound, every 25', around an intersection, etc.*)

Quantities Report By Named Boundary

- In order to calculate true prismatic quantities, we have created a new Civil Analysis tool.

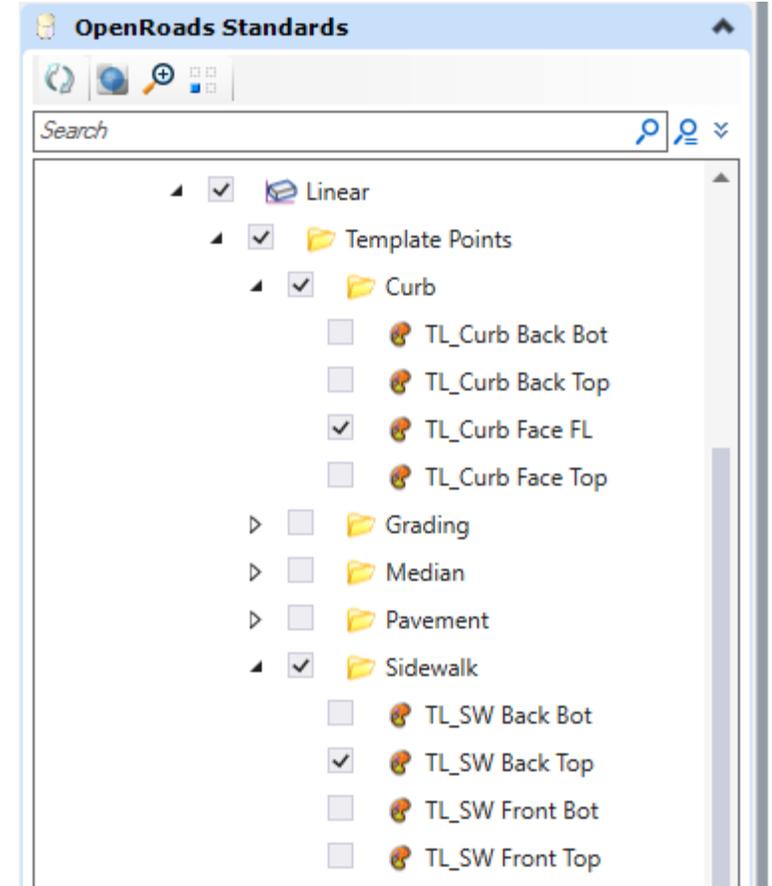

Civil Analysis > Quantities Report By Named Boundary

Controlling What is Calculated

Preparing Your Quantities

- The tool works on a “what you see is what you get” basis.
- Turn off/on **features** to control what is calculated.
- Level display will be ignored – **features rule**.
- Quantities are calculated from the **3D model only**.

Element Selection

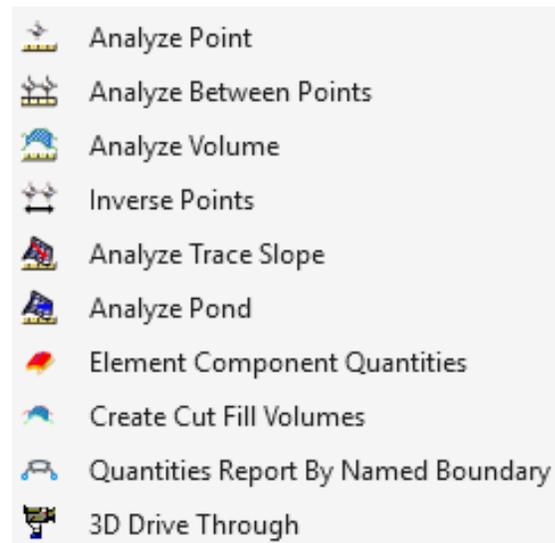

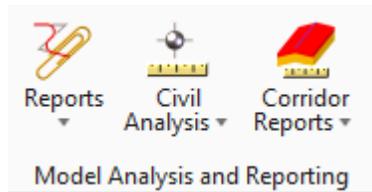

Element Selection dialog box. It contains several icons for selecting elements in the model, including a selection tool, a pan tool, a zoom tool, and a delete tool. The dialog box is titled "Element Selection" and has a close button (X) in the top right corner.

Cut/Fill Volumes

Cut/Fill Solids

- In order to calculate cut/fill, we must first create 3D solids that we can then use to produce our cut/fill volumes.

Civil Analysis > Create Cut Fill Volumes

Controlling How Your Quantities Are Reported

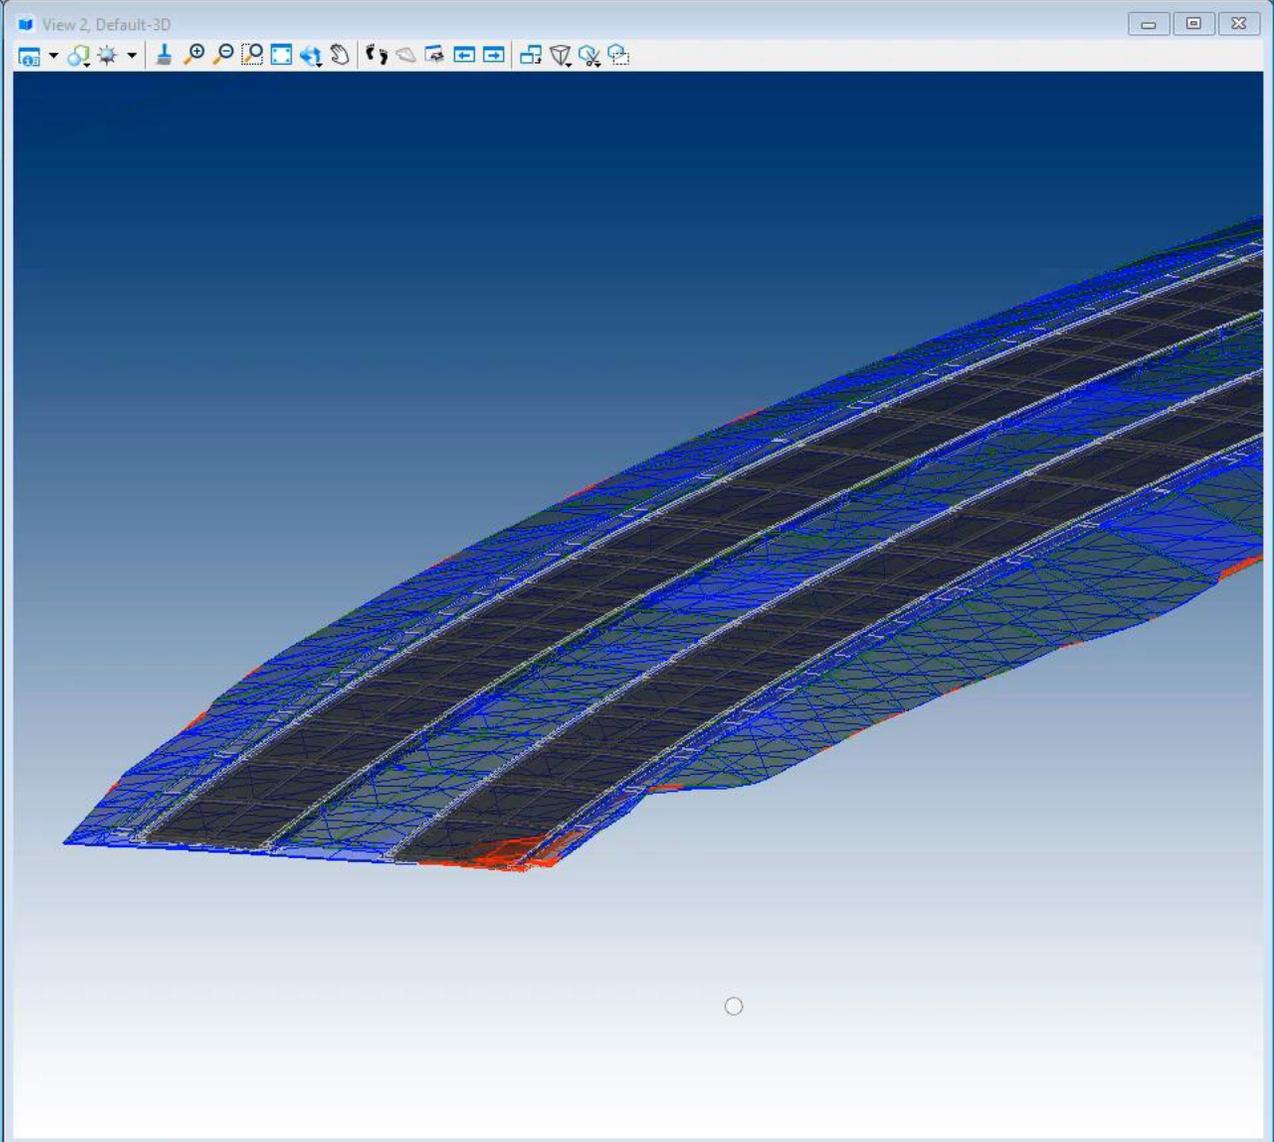

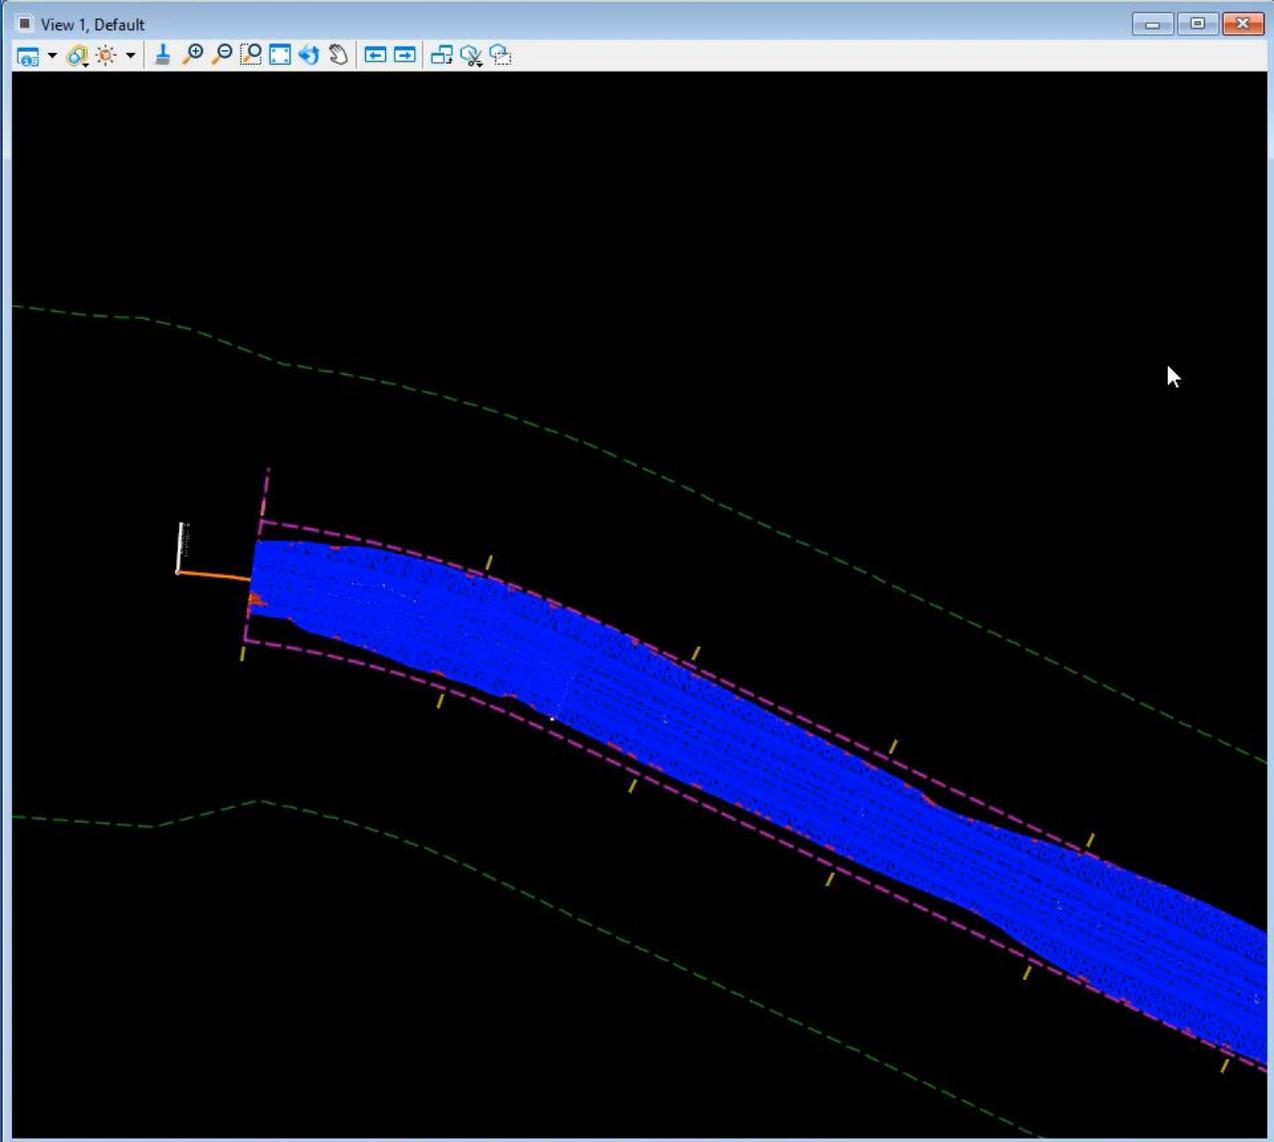

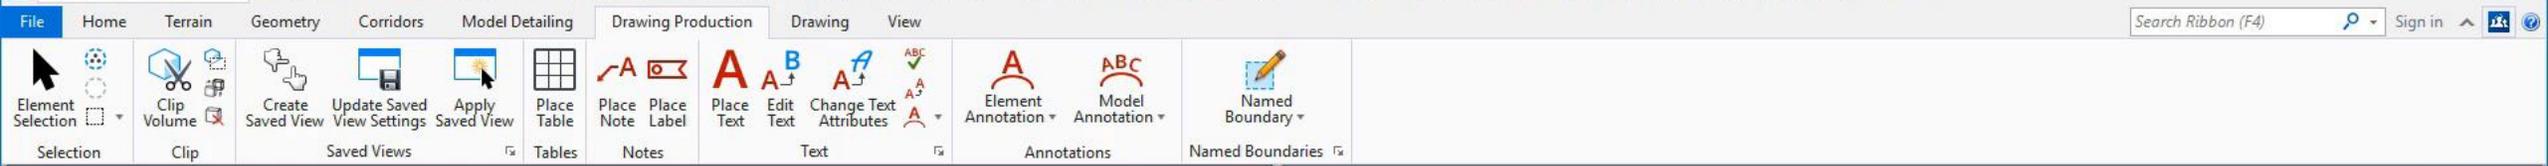

Quantity Reporting

- I mentioned earlier that we wanted to give users the ability to control how their quantities are reported (e.g. *Eastbound vs. Westbound, every 25', around an intersection, etc.*)
- This capability is enabled through the use of *Named Boundaries*.
- This is the same tool that places *Named Boundaries* for use in plans production.

Example: *Eastbound vs. Westbound*

Example: *Every 50'*

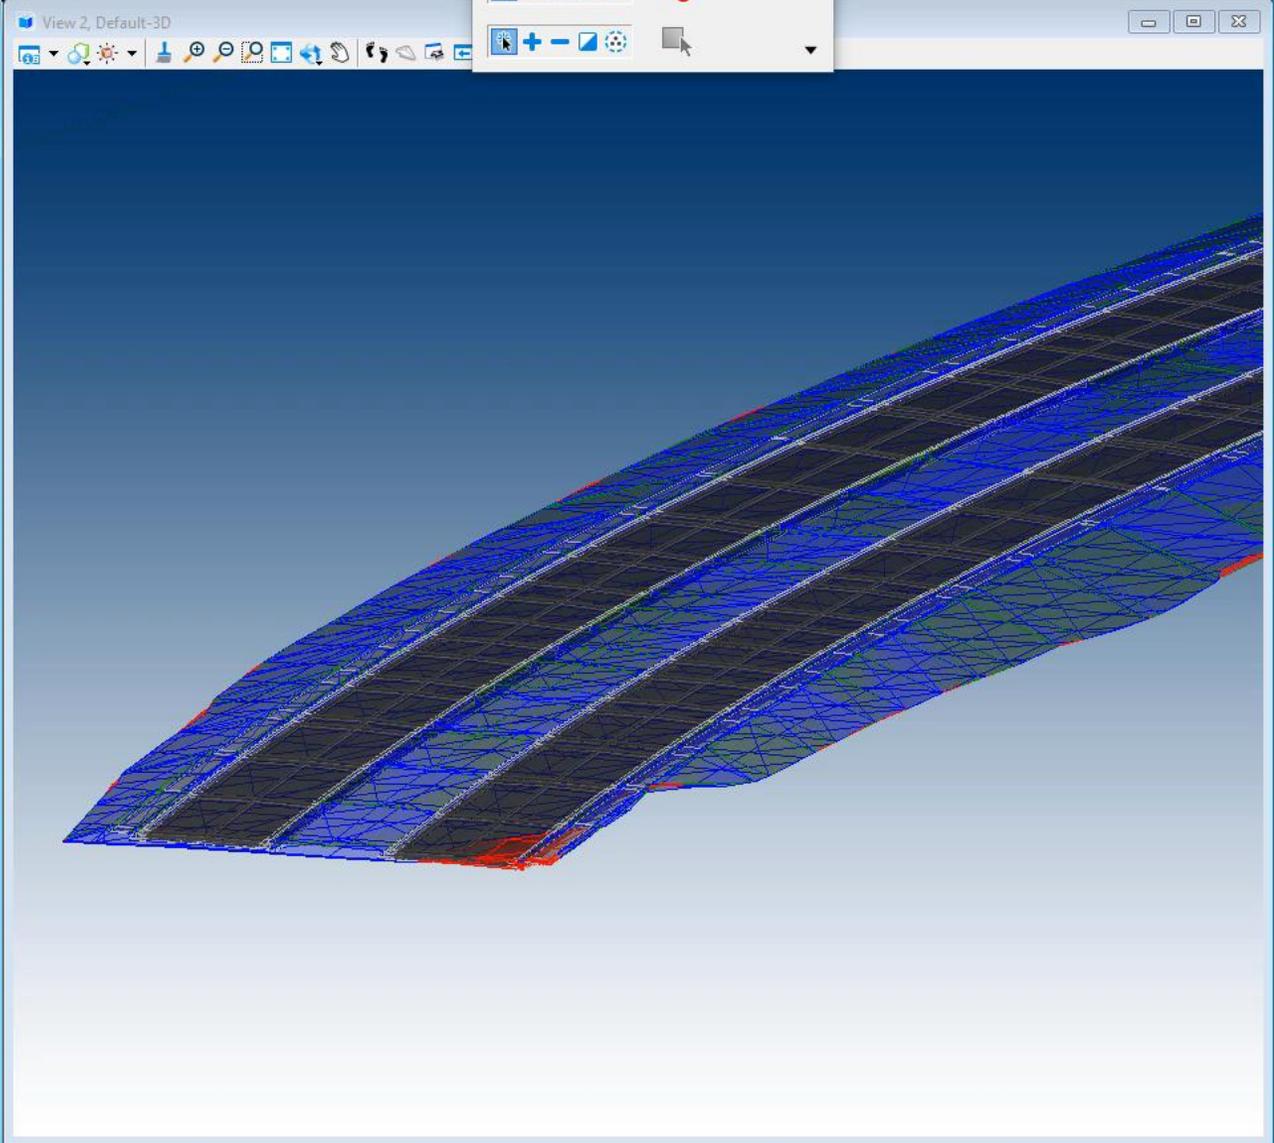

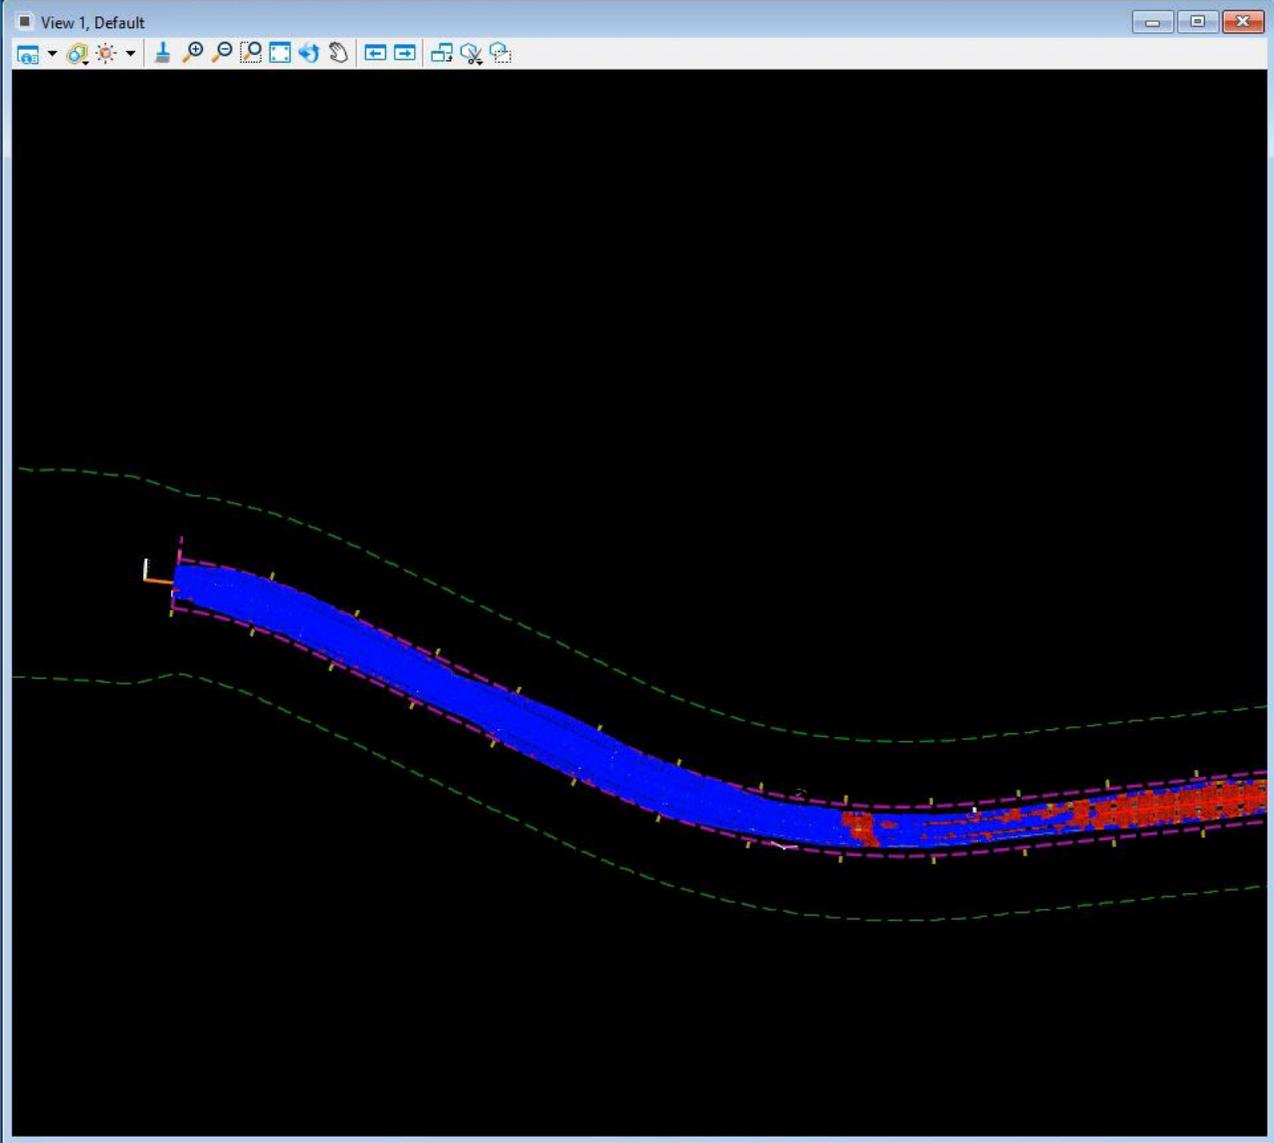

Example: *By Sheet*

Checking Your Quantities

Checking Your Quantities

- So far we've seen various methods on how to calculate your quantities, but how do you check them to make sure they are correct?
- To help with this, we've added the option **Display Clipped Graphics**.
