Innovation Insight for Engineering Technology: Why ET, IT and OT Are More Than the Sum of Their Parts

Published: 27 August 2019 ID: G00382466

Analyst(s): Kristian Steenstrup, Marc Halpern

CIOs must understand engineering technology as well as OT and IT, and the connections between the three to guide their companies' journeys toward achieving digital business goals such as Industrie 4.0. This research explains why and provides guidance on how to begin embracing ET.

Key Findings

- Few CIOs engage in selecting or supporting engineering technology (ET) platforms, despite their importance to operational technology (OT) and IT deployments.
- ET portfolios rank among the oldest legacy technology portfolios and need modernization in manufacturing industries and asset-intensive industries.
- Investments in modern ET are growing and becoming a bigger part of technology portfolios in

Market Trends: Software Providers Ramp Up to Serve the Emerging Digital Twin Market

Published: 6 September 2019 ID: G00450606

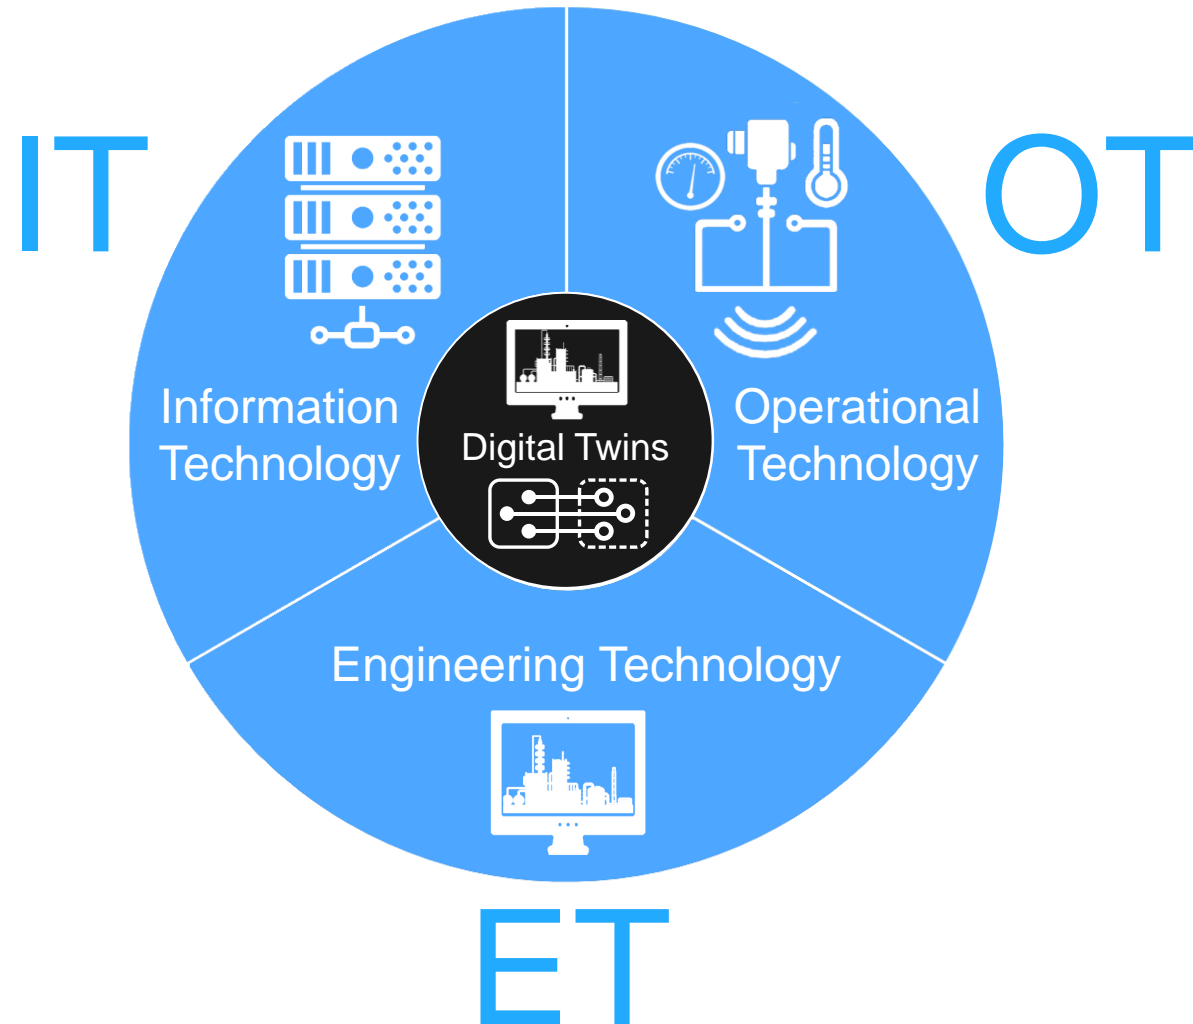

Analyst(s): Alfonso Velosa, Benoit Lheureux, Peter Havart-Simkin

Digital twins are a rapidly emerging and evolving part of enterprise digital business projects. Technology and service providers need to build their digital-twin-enabling technology capabilities and portfolios, plus bolster their go-to-market strategies, to establish a differentiated value position.

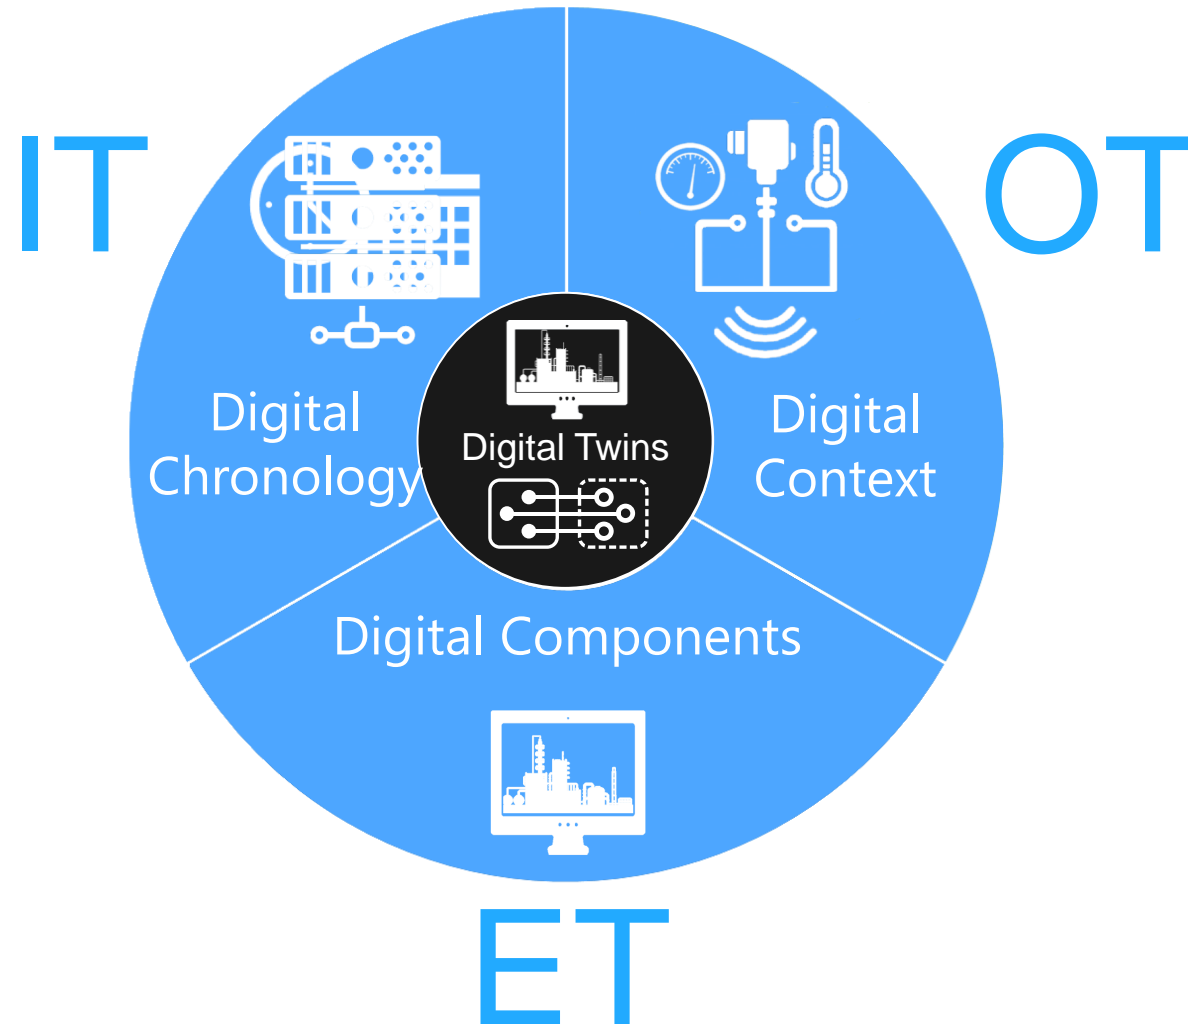

Key Findings

- Customers' understanding of digital twin development, value or strategic implications remains emergent. But Gartner's survey of enterprises implementing Internet of Things (IoT) projects indicates 75% of enterprises have implemented or plan to implement such projects, which points to a rapid experimentation and adoption trend.
- The digital twin vendor landscape is crowded, even though most digital twin initiatives are custom engagements. Most technology and service providers (TSPs) have technology-enabling capabilities, while a few are differentiating by building portfolios of digital twin templates.

Processing Plant

Democratic Republic of the Congo

Bentley's plant design software allowed the project team to design a complete, intelligent digital twin to the greatest level of detail.

Hatch were able to reduce production ramp-up time to design name plate after hot commissioning, from six months to one week.

A photograph of a vast archive of old, yellowed, and disorganized documents stored on blue metal shelves. The shelves are filled with numerous stacks of papers, some bound together with string. The documents appear aged and worn, with some showing signs of damage and discoloration. The overall scene conveys a sense of a massive, unmanaged collection of historical information.
