A photograph of a large industrial facility, possibly a refinery or chemical plant, at night. The scene is illuminated by bright blue and white lights, highlighting the complex network of pipes, scaffolding, and large cylindrical storage tanks. The sky is dark, and the overall atmosphere is industrial and high-tech. A large, stylized white 'V' shape is overlaid on the left side of the image, partially obscuring the text.

Accelerate Your Plant Projects with a Component-Based Solution

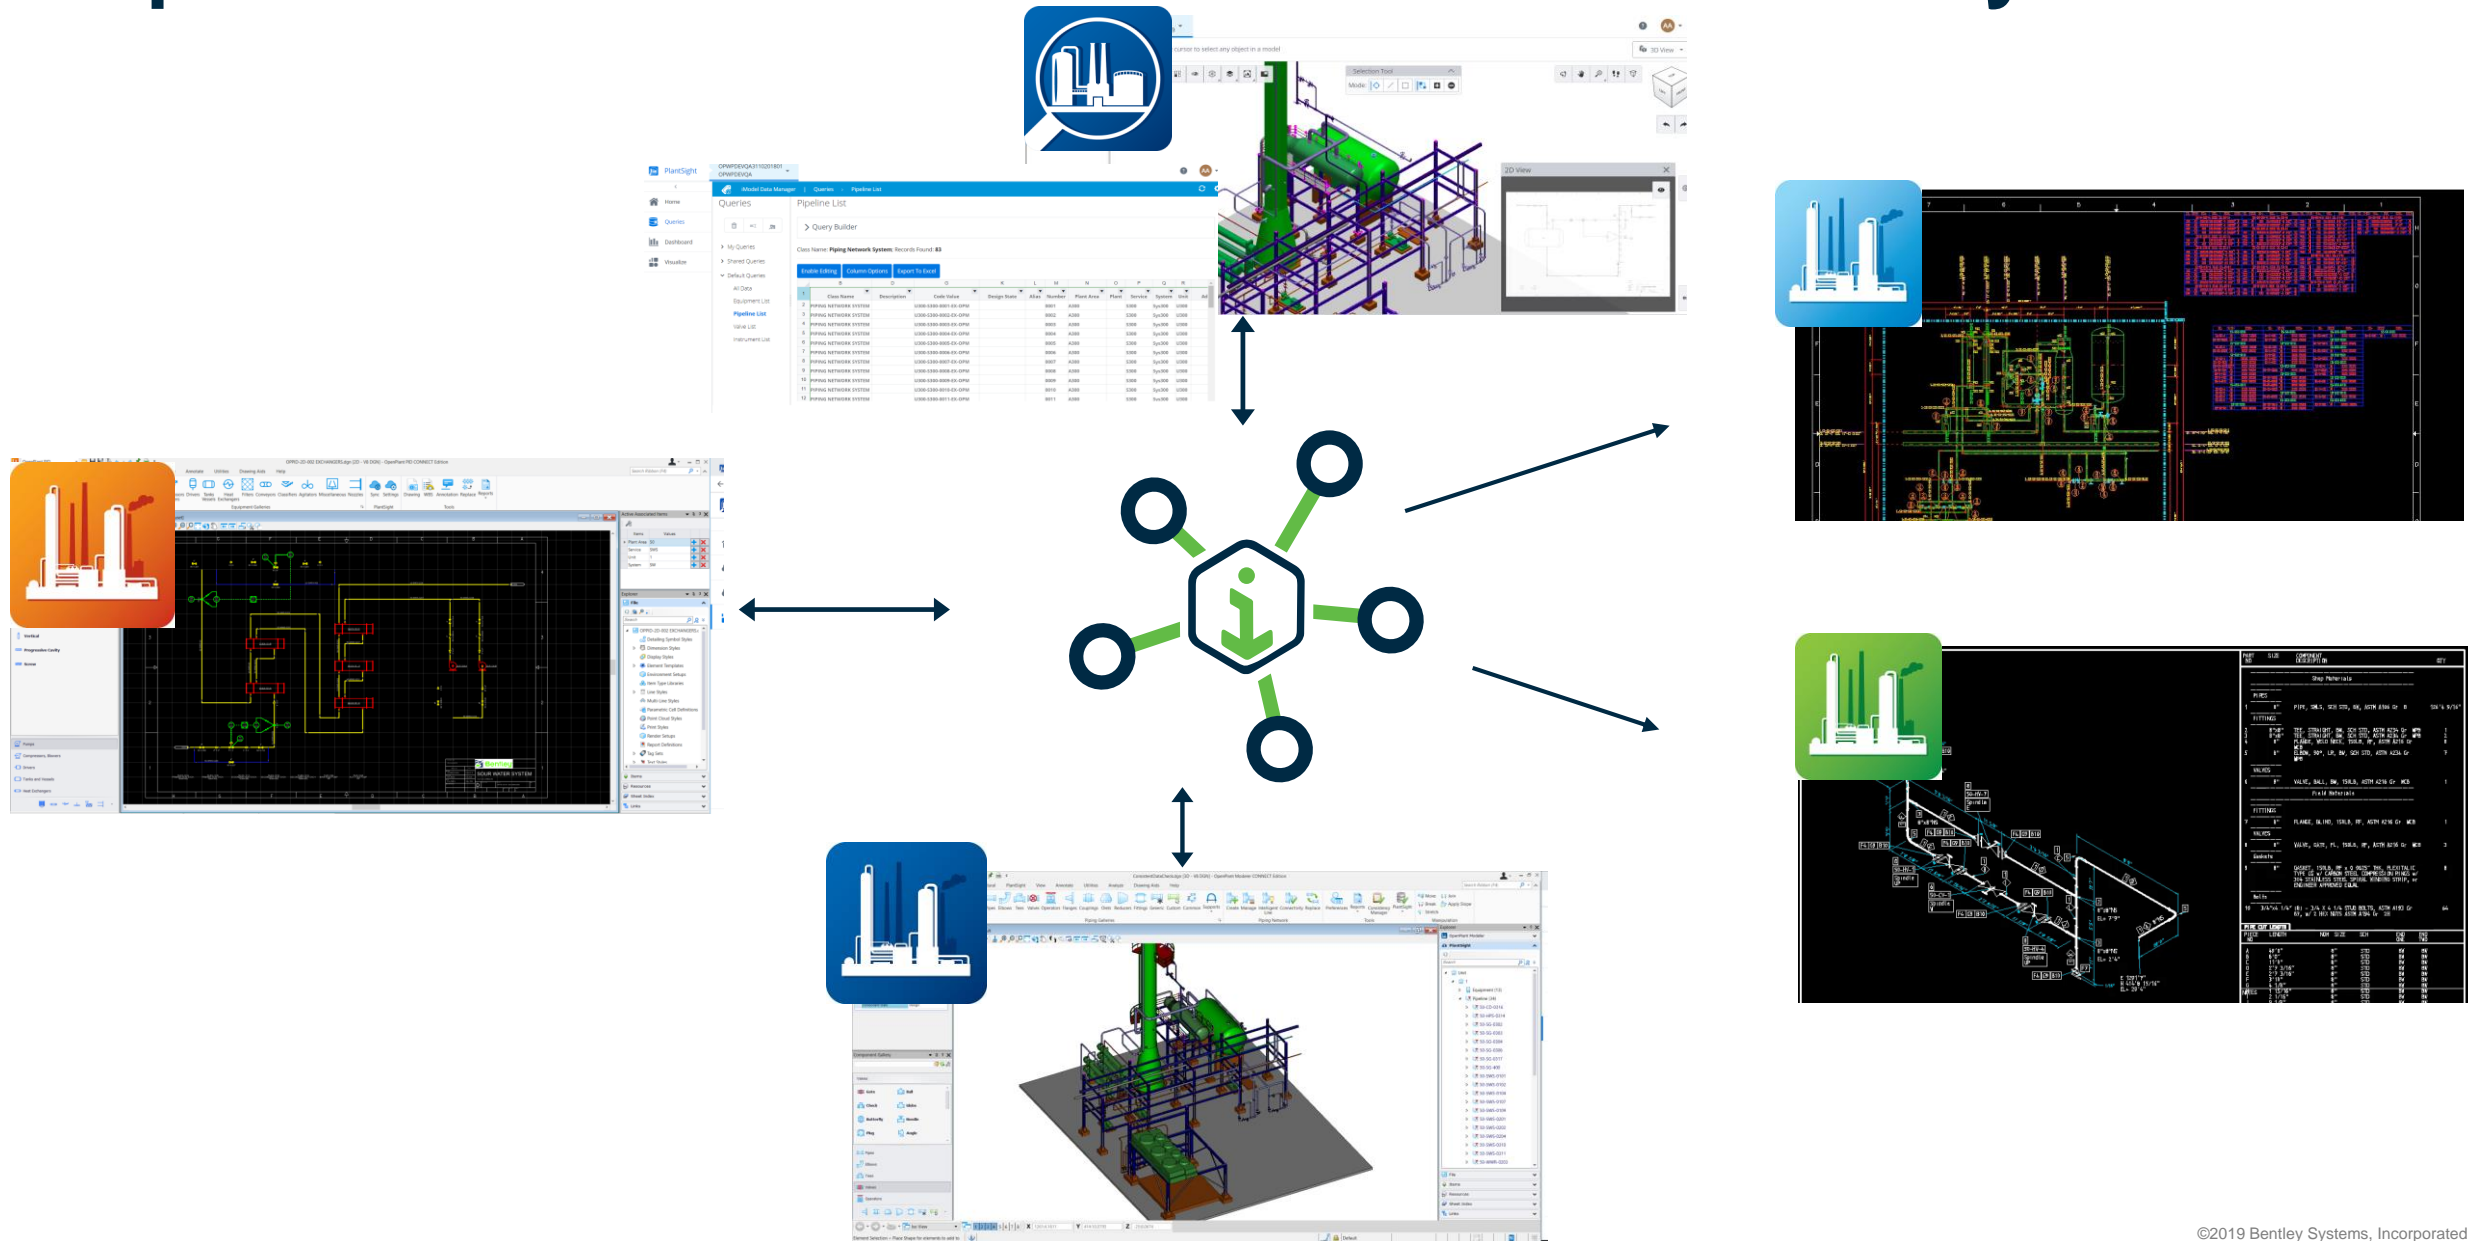

Jarek Sitek – Bentley Systems

OpenPlant CONNECT Edition: Component-Based Design

- Collaboration
 - Component-based concurrent design with intelligent change merging
 - Consolidated multi-discipline modeling and management
 - High performing and supports offline mode
- Data Consistency
 - Consistent data available anytime, anywhere
- Cloud-based services
 - Data management
 - Visualizations
 - Extensibility
- Aligning engineering and operations

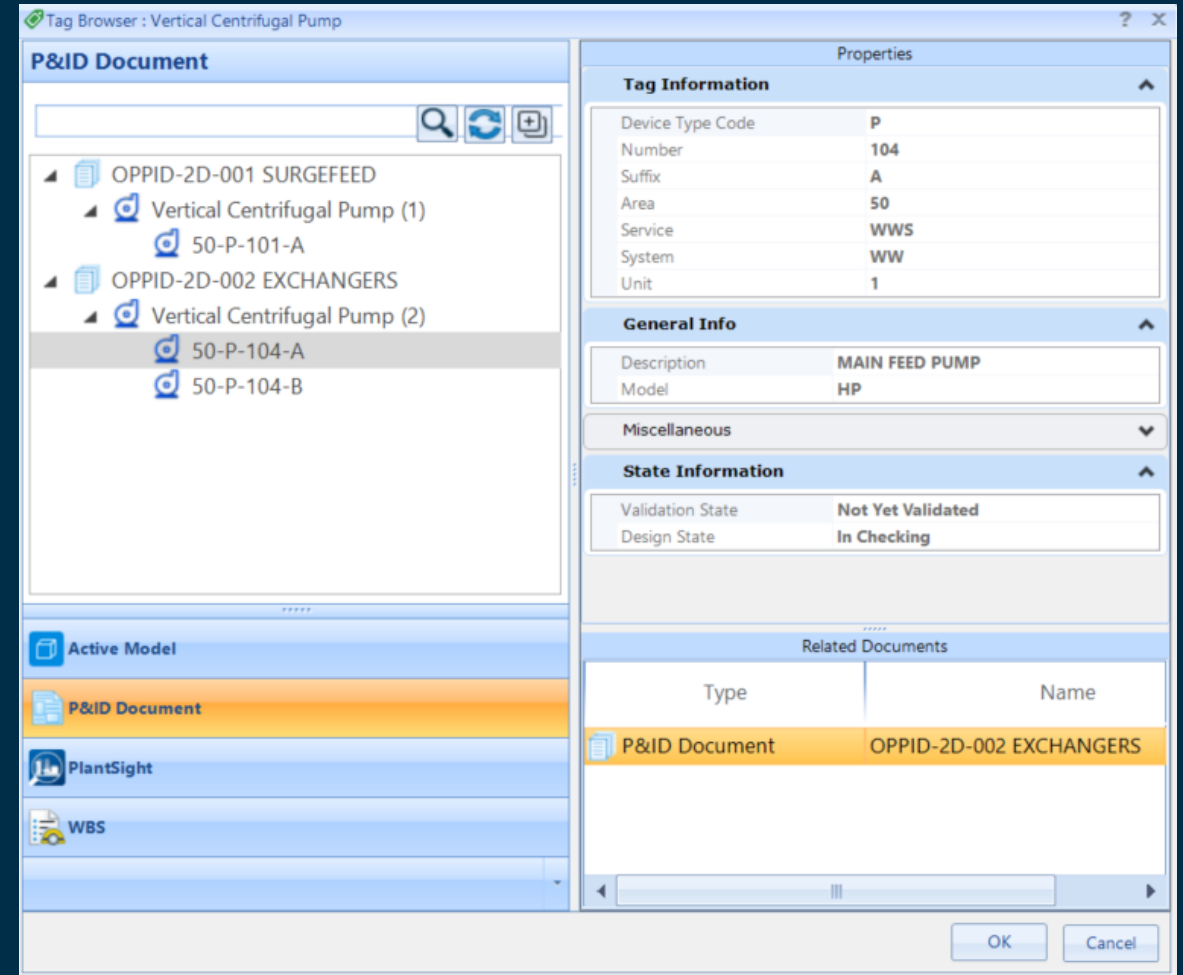

OpenPlant CONNECT Edition: Data Consistency

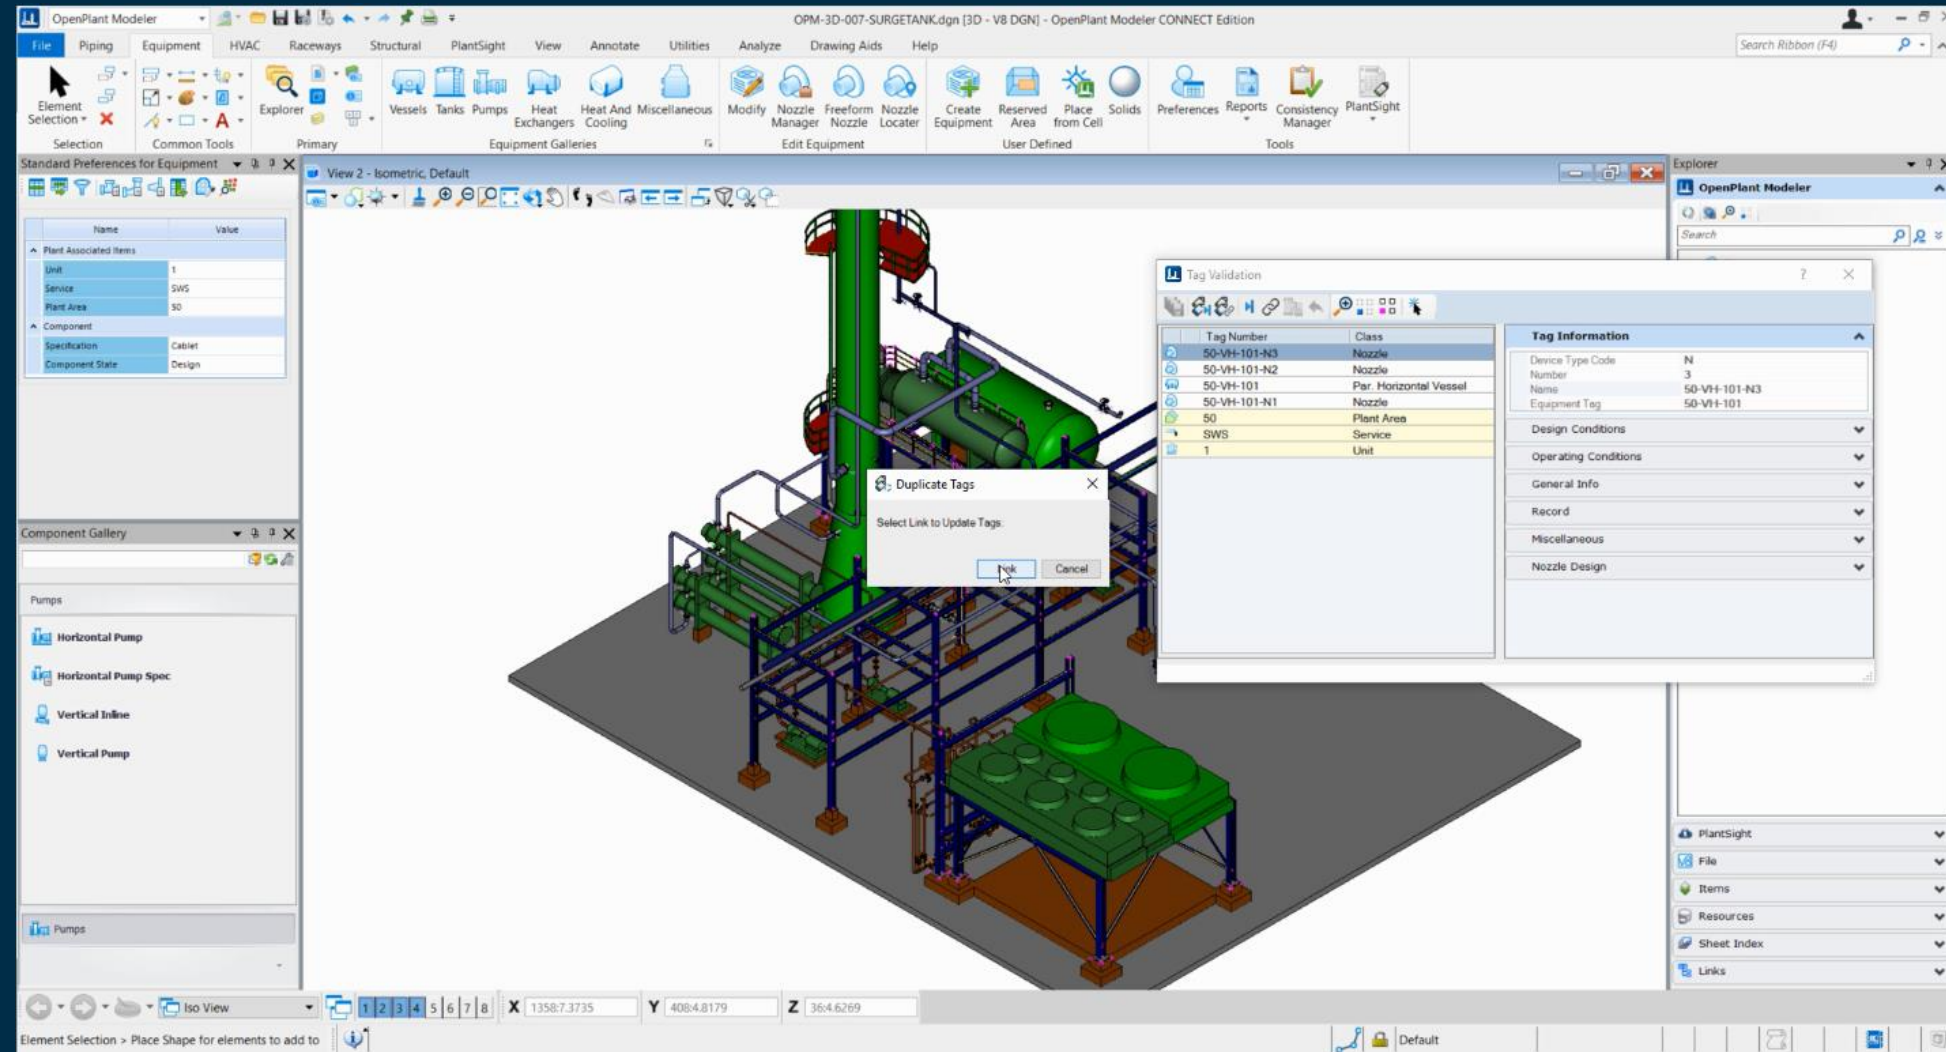

Data Consistency – Tag Management

- Intelligent reservation of tags
- Ability to assign next available tag number
- Easily browse available tags from PID documents, digital twin, or active model
- Plant breakdown items synching between PID and 3D design

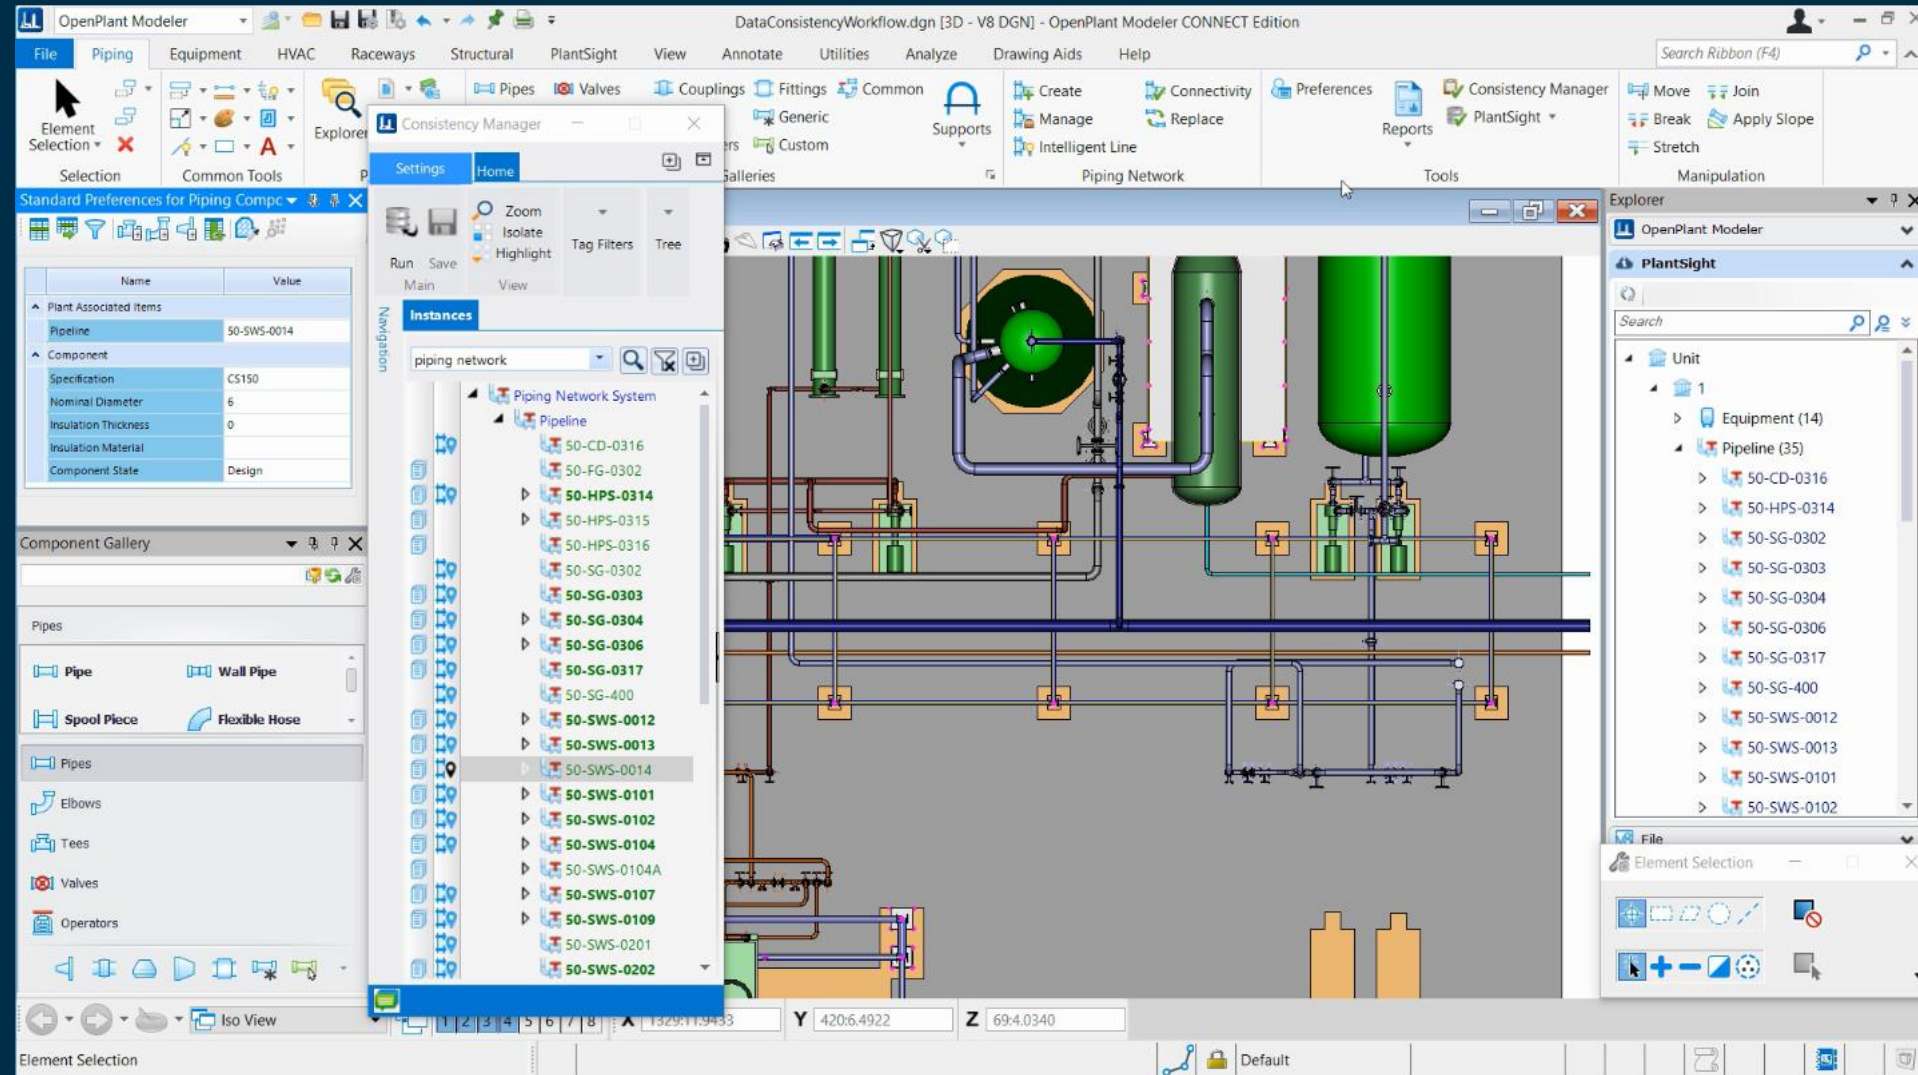

Data Consistency – Tag Conflict Resolution

- Easily resolve any conflicts
- Reuse tags defined in offline mode

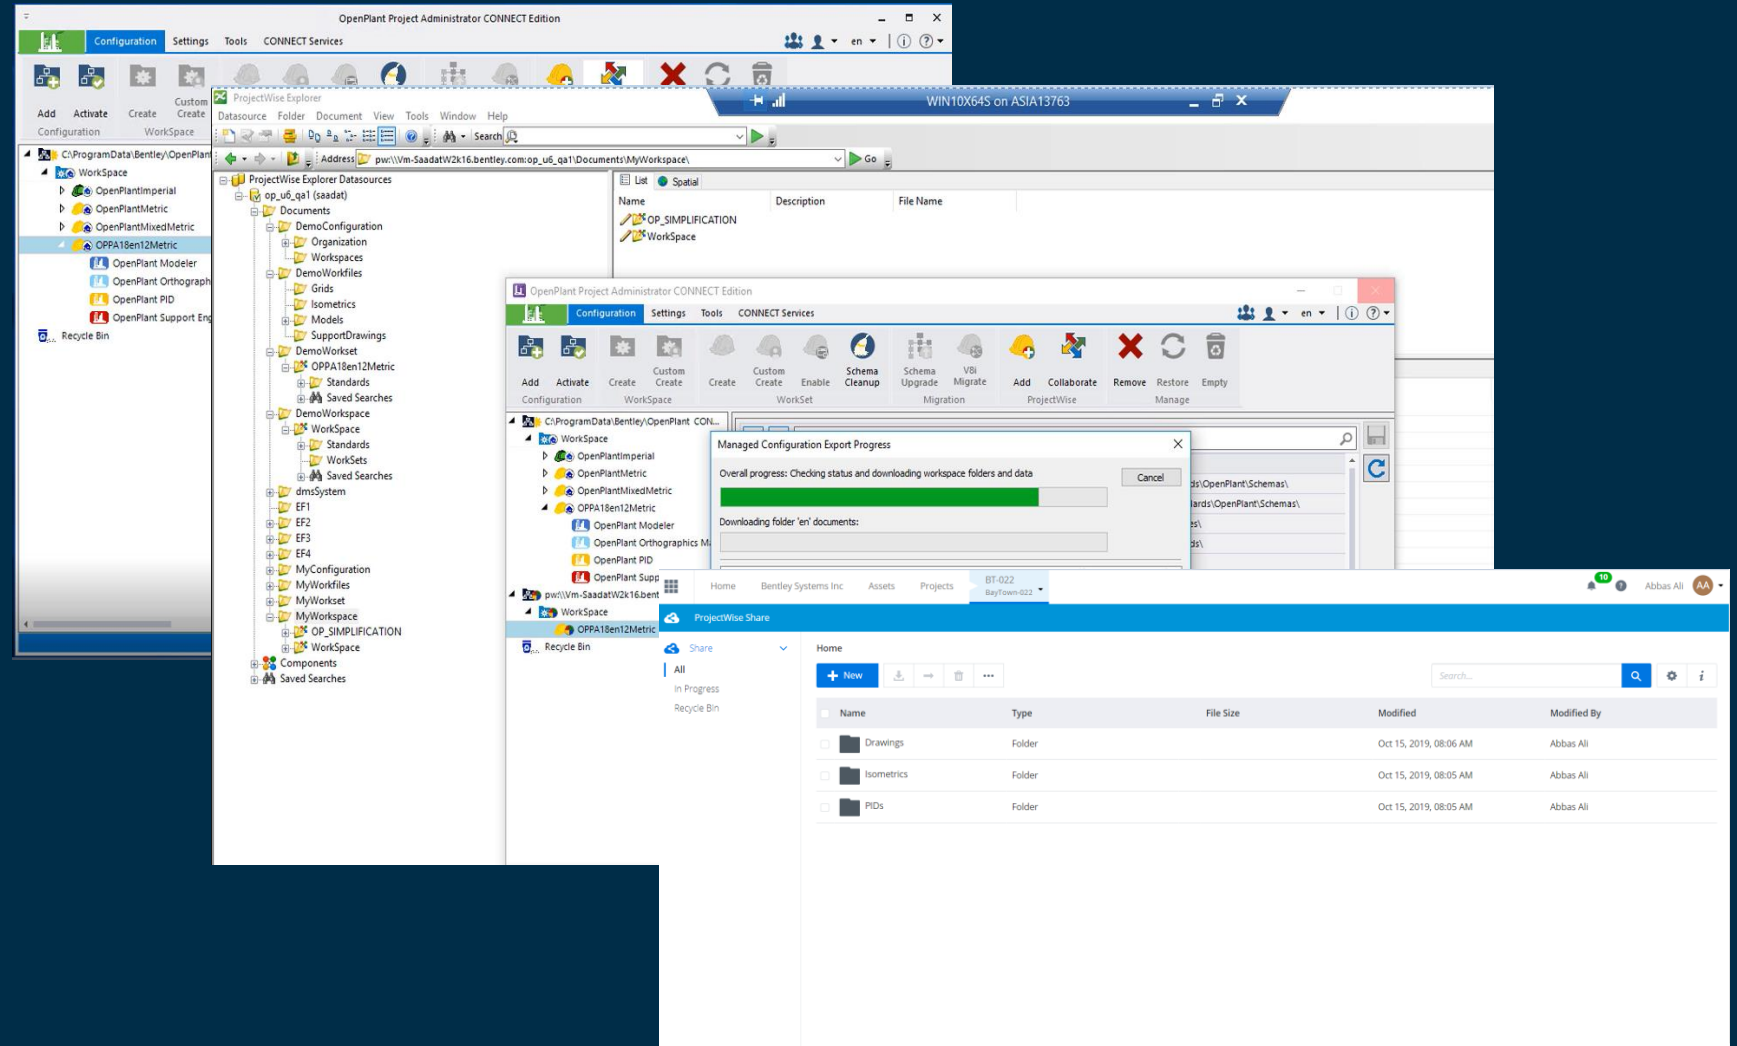

Data Consistency – Always use Accurate Data

- Ensures consistent and up-to-date engineering information across the entire design phase

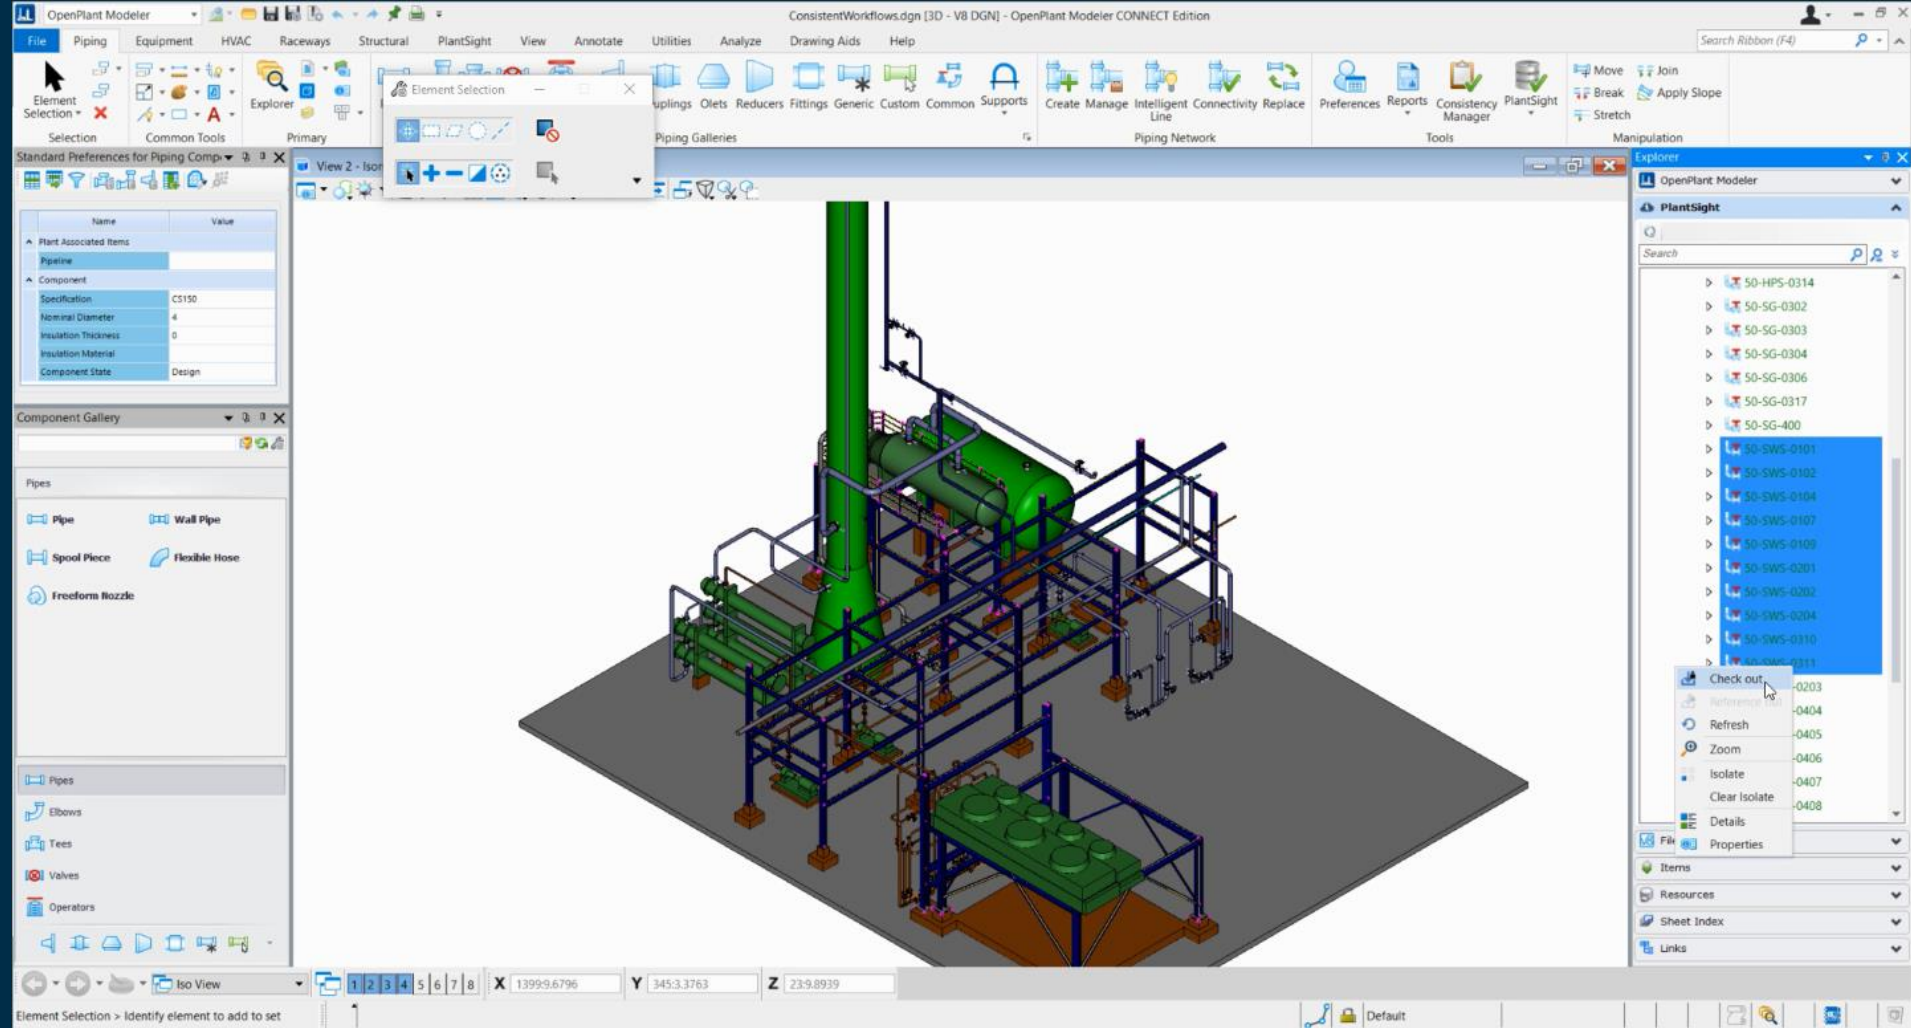

Collaboration – Easily setup distributed teams

- Better control for distributed teams providing flexible features for multi-discipline modeling

Collaboration – Component based workflows

- Better control for distributed teams providing flexible features for multi-discipline modeling

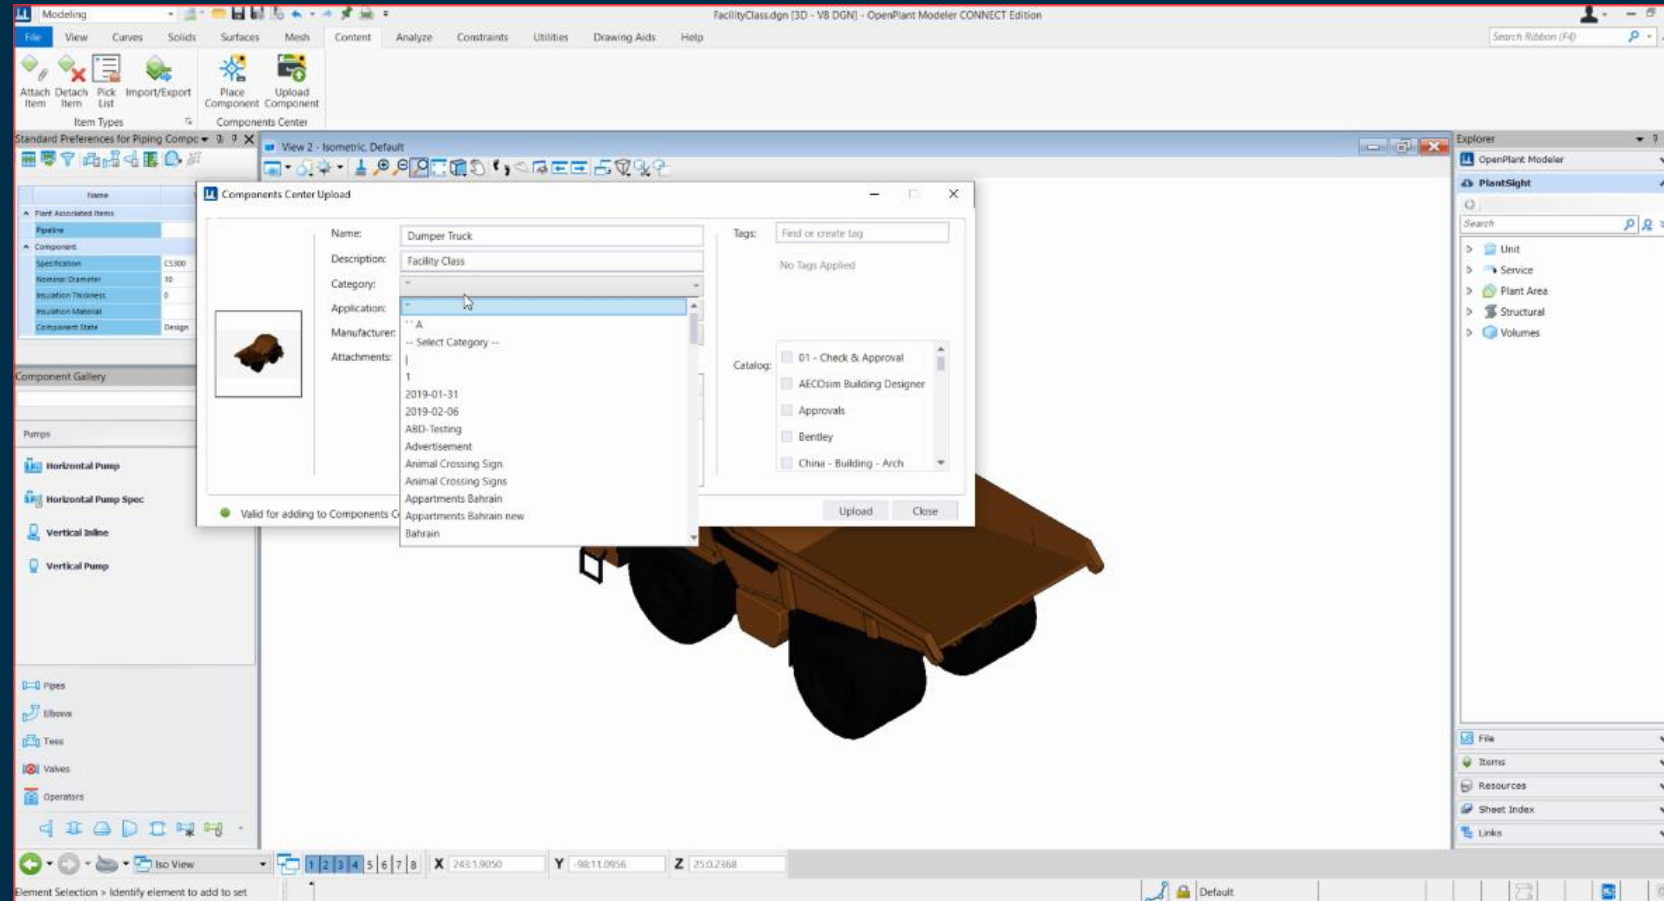

Collaboration – Component based workflows

- Better control for distributed teams providing flexible features for multi-discipline modeling

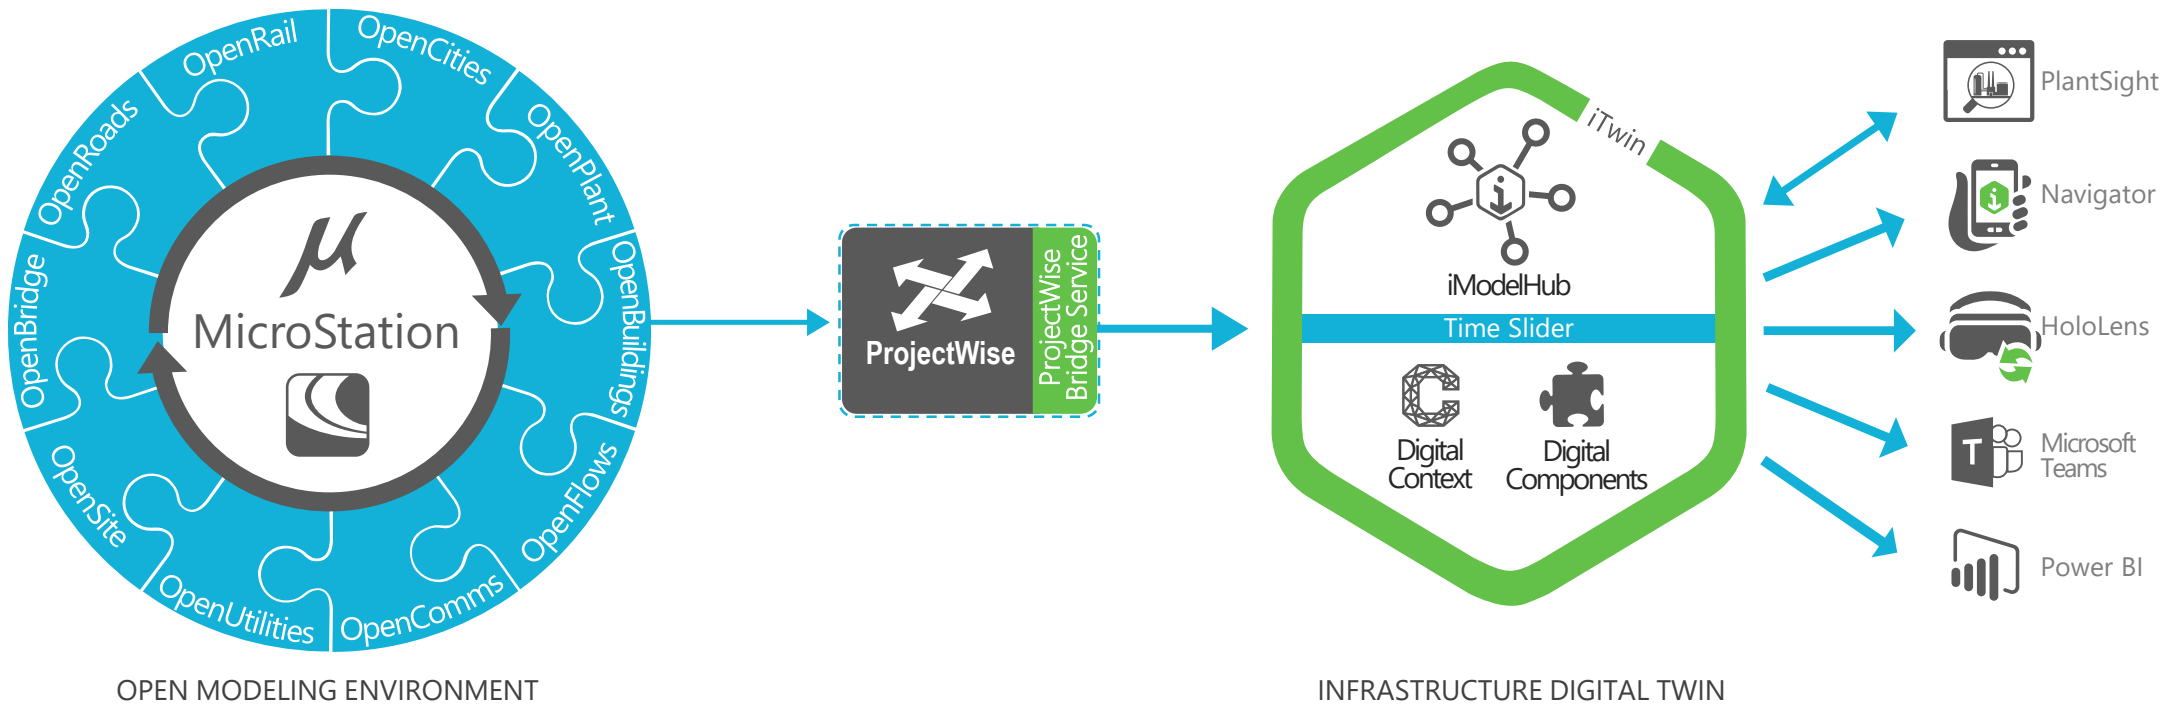

Collaboration – Using Component Center

- Components Center a cloud service that provides users with the objects that can be used in the design, construction, and operational workflows.
 - Custom components support for OpenPlant
 - Users can upload and define their own content.

OpenPlant CONNECT Edition – Cloud-based Services

An iTwin is an Infrastructure Digital Twin

OpenPlant CONNECT Edition – Scalability

- Same solution to execute small to big projects

- Same solution to do basic engineering or detailed design

Plant Design Project Challenges

Brownfield / Greenfield

- Data acquisition
- Existing site conditions
- Data from various sources
- Communication
- Integration
- Safety

- Layout optimization
- Multiple contractors
- Multi-discipline
- Distributed / Remote teams
- Data handover
- Stakeholders involvement

Physical Asset

Digital Twins

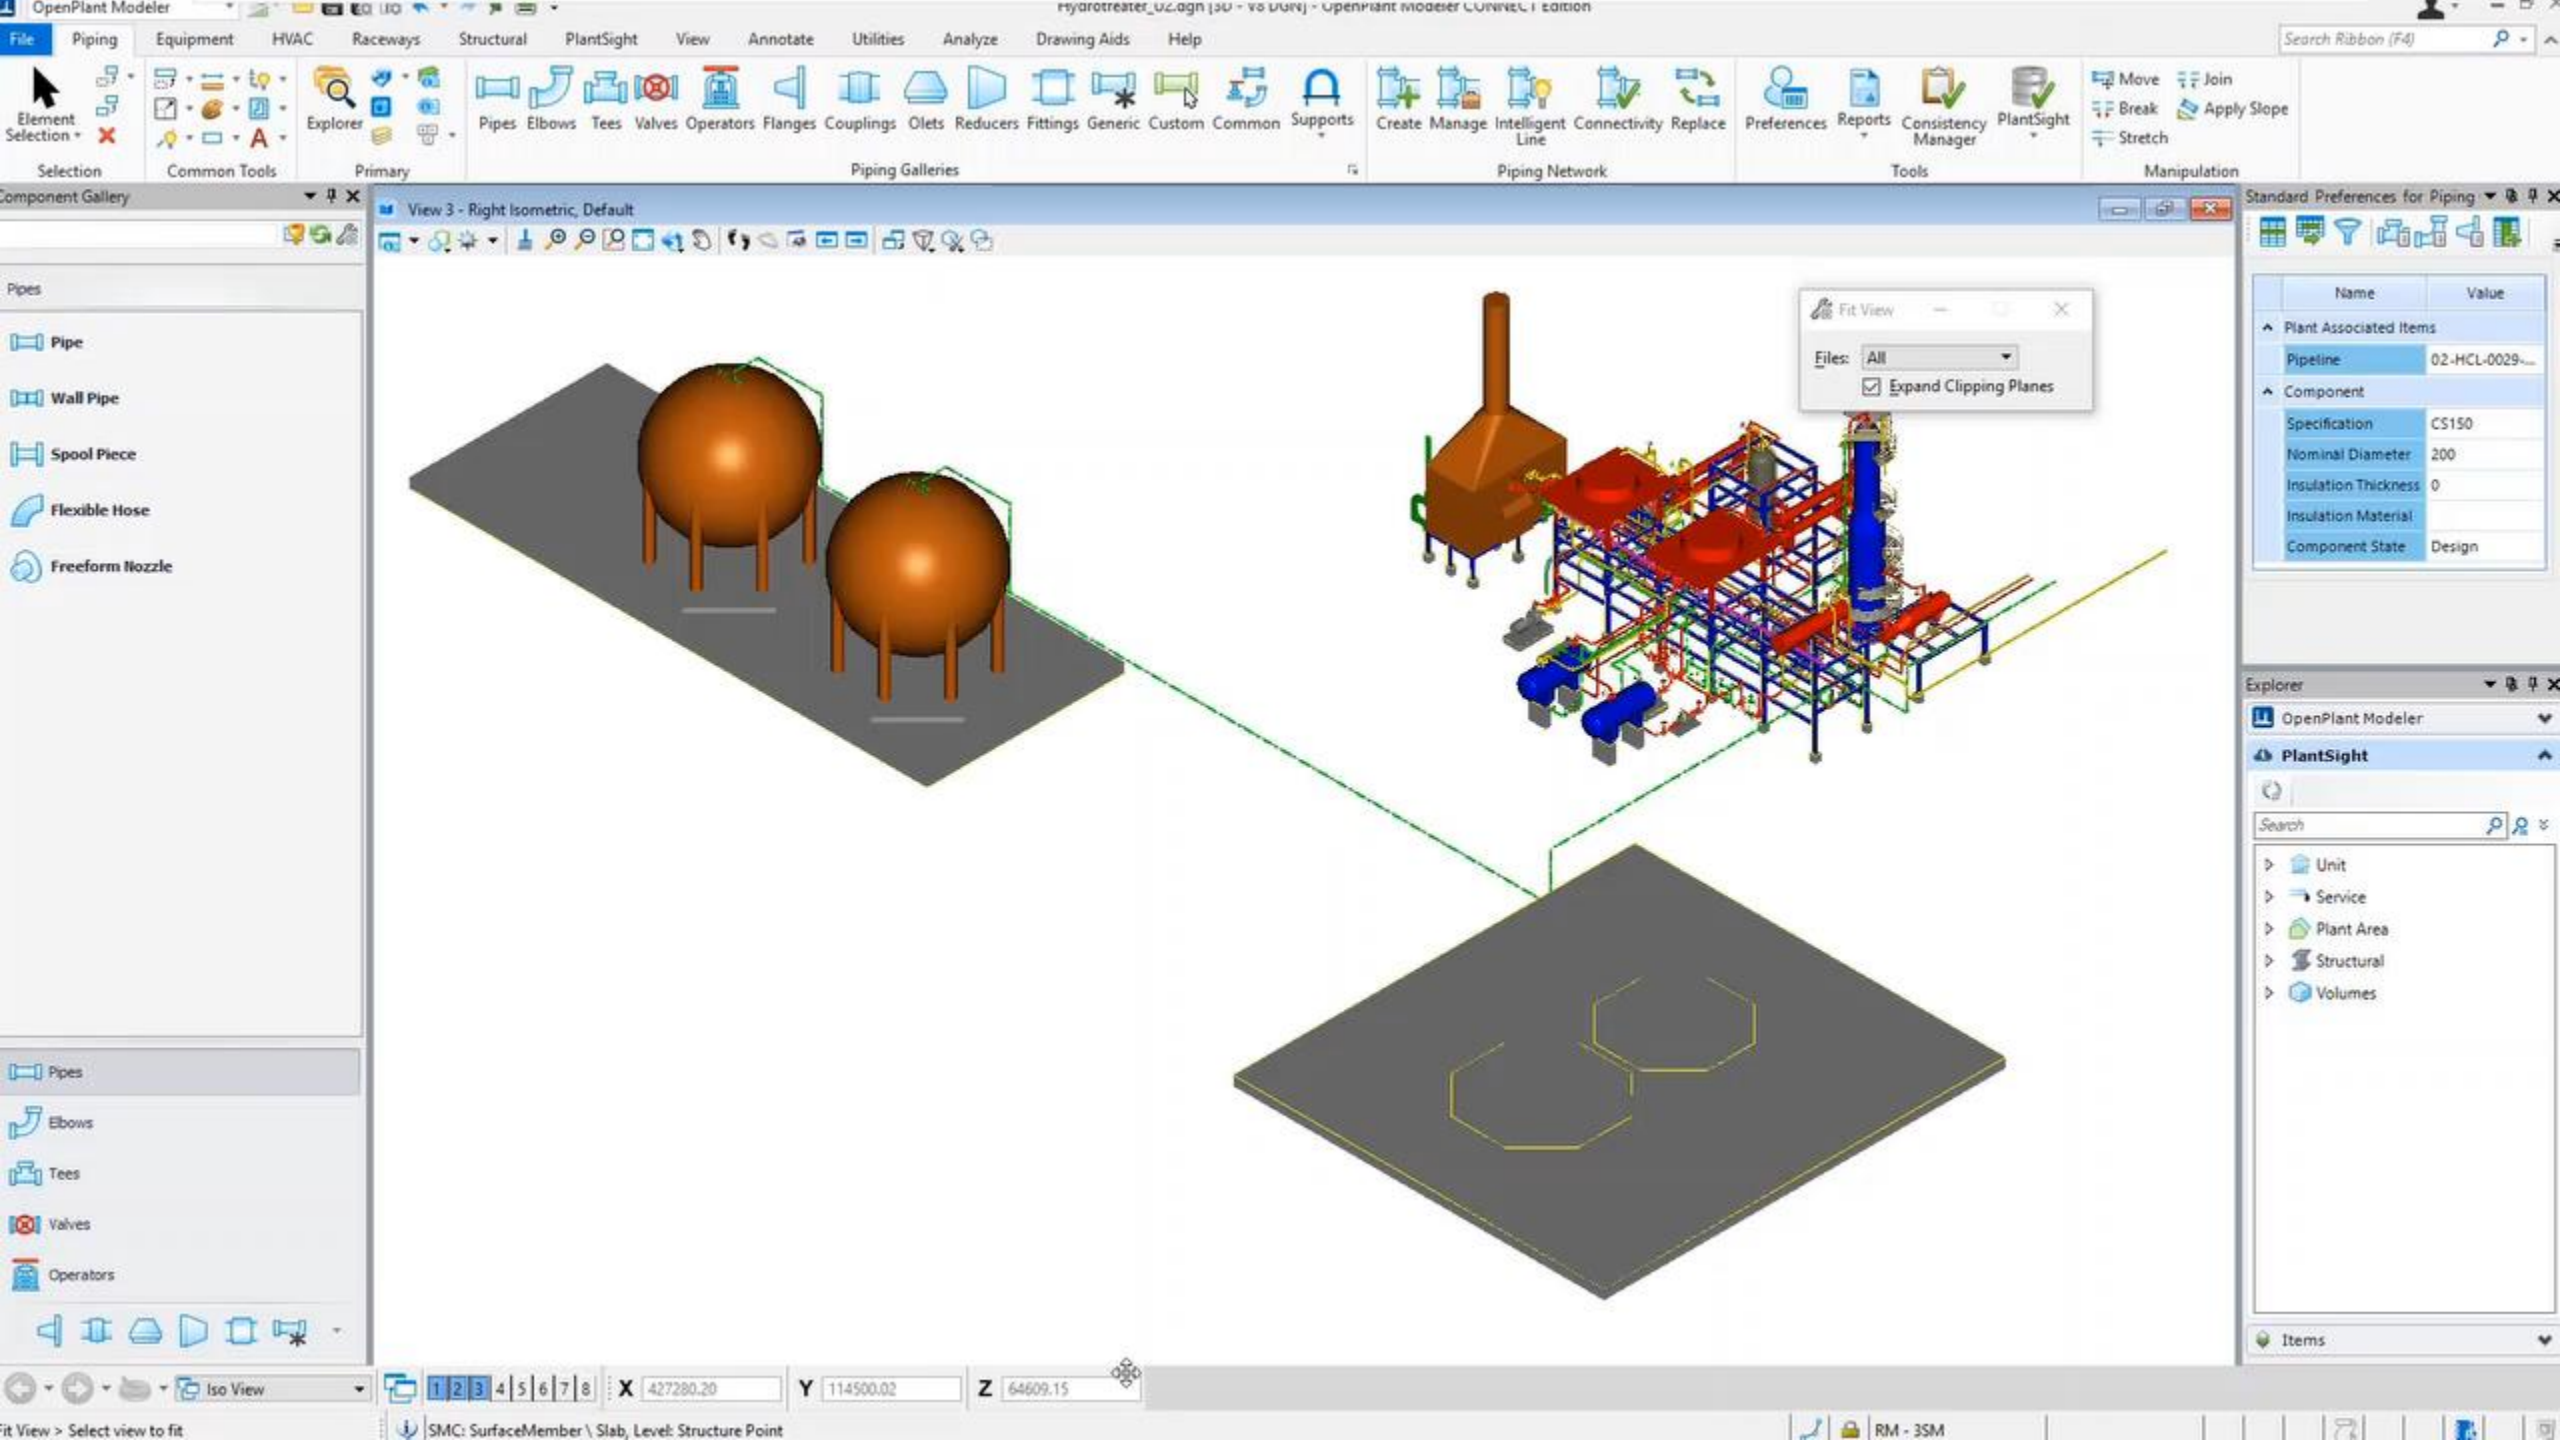

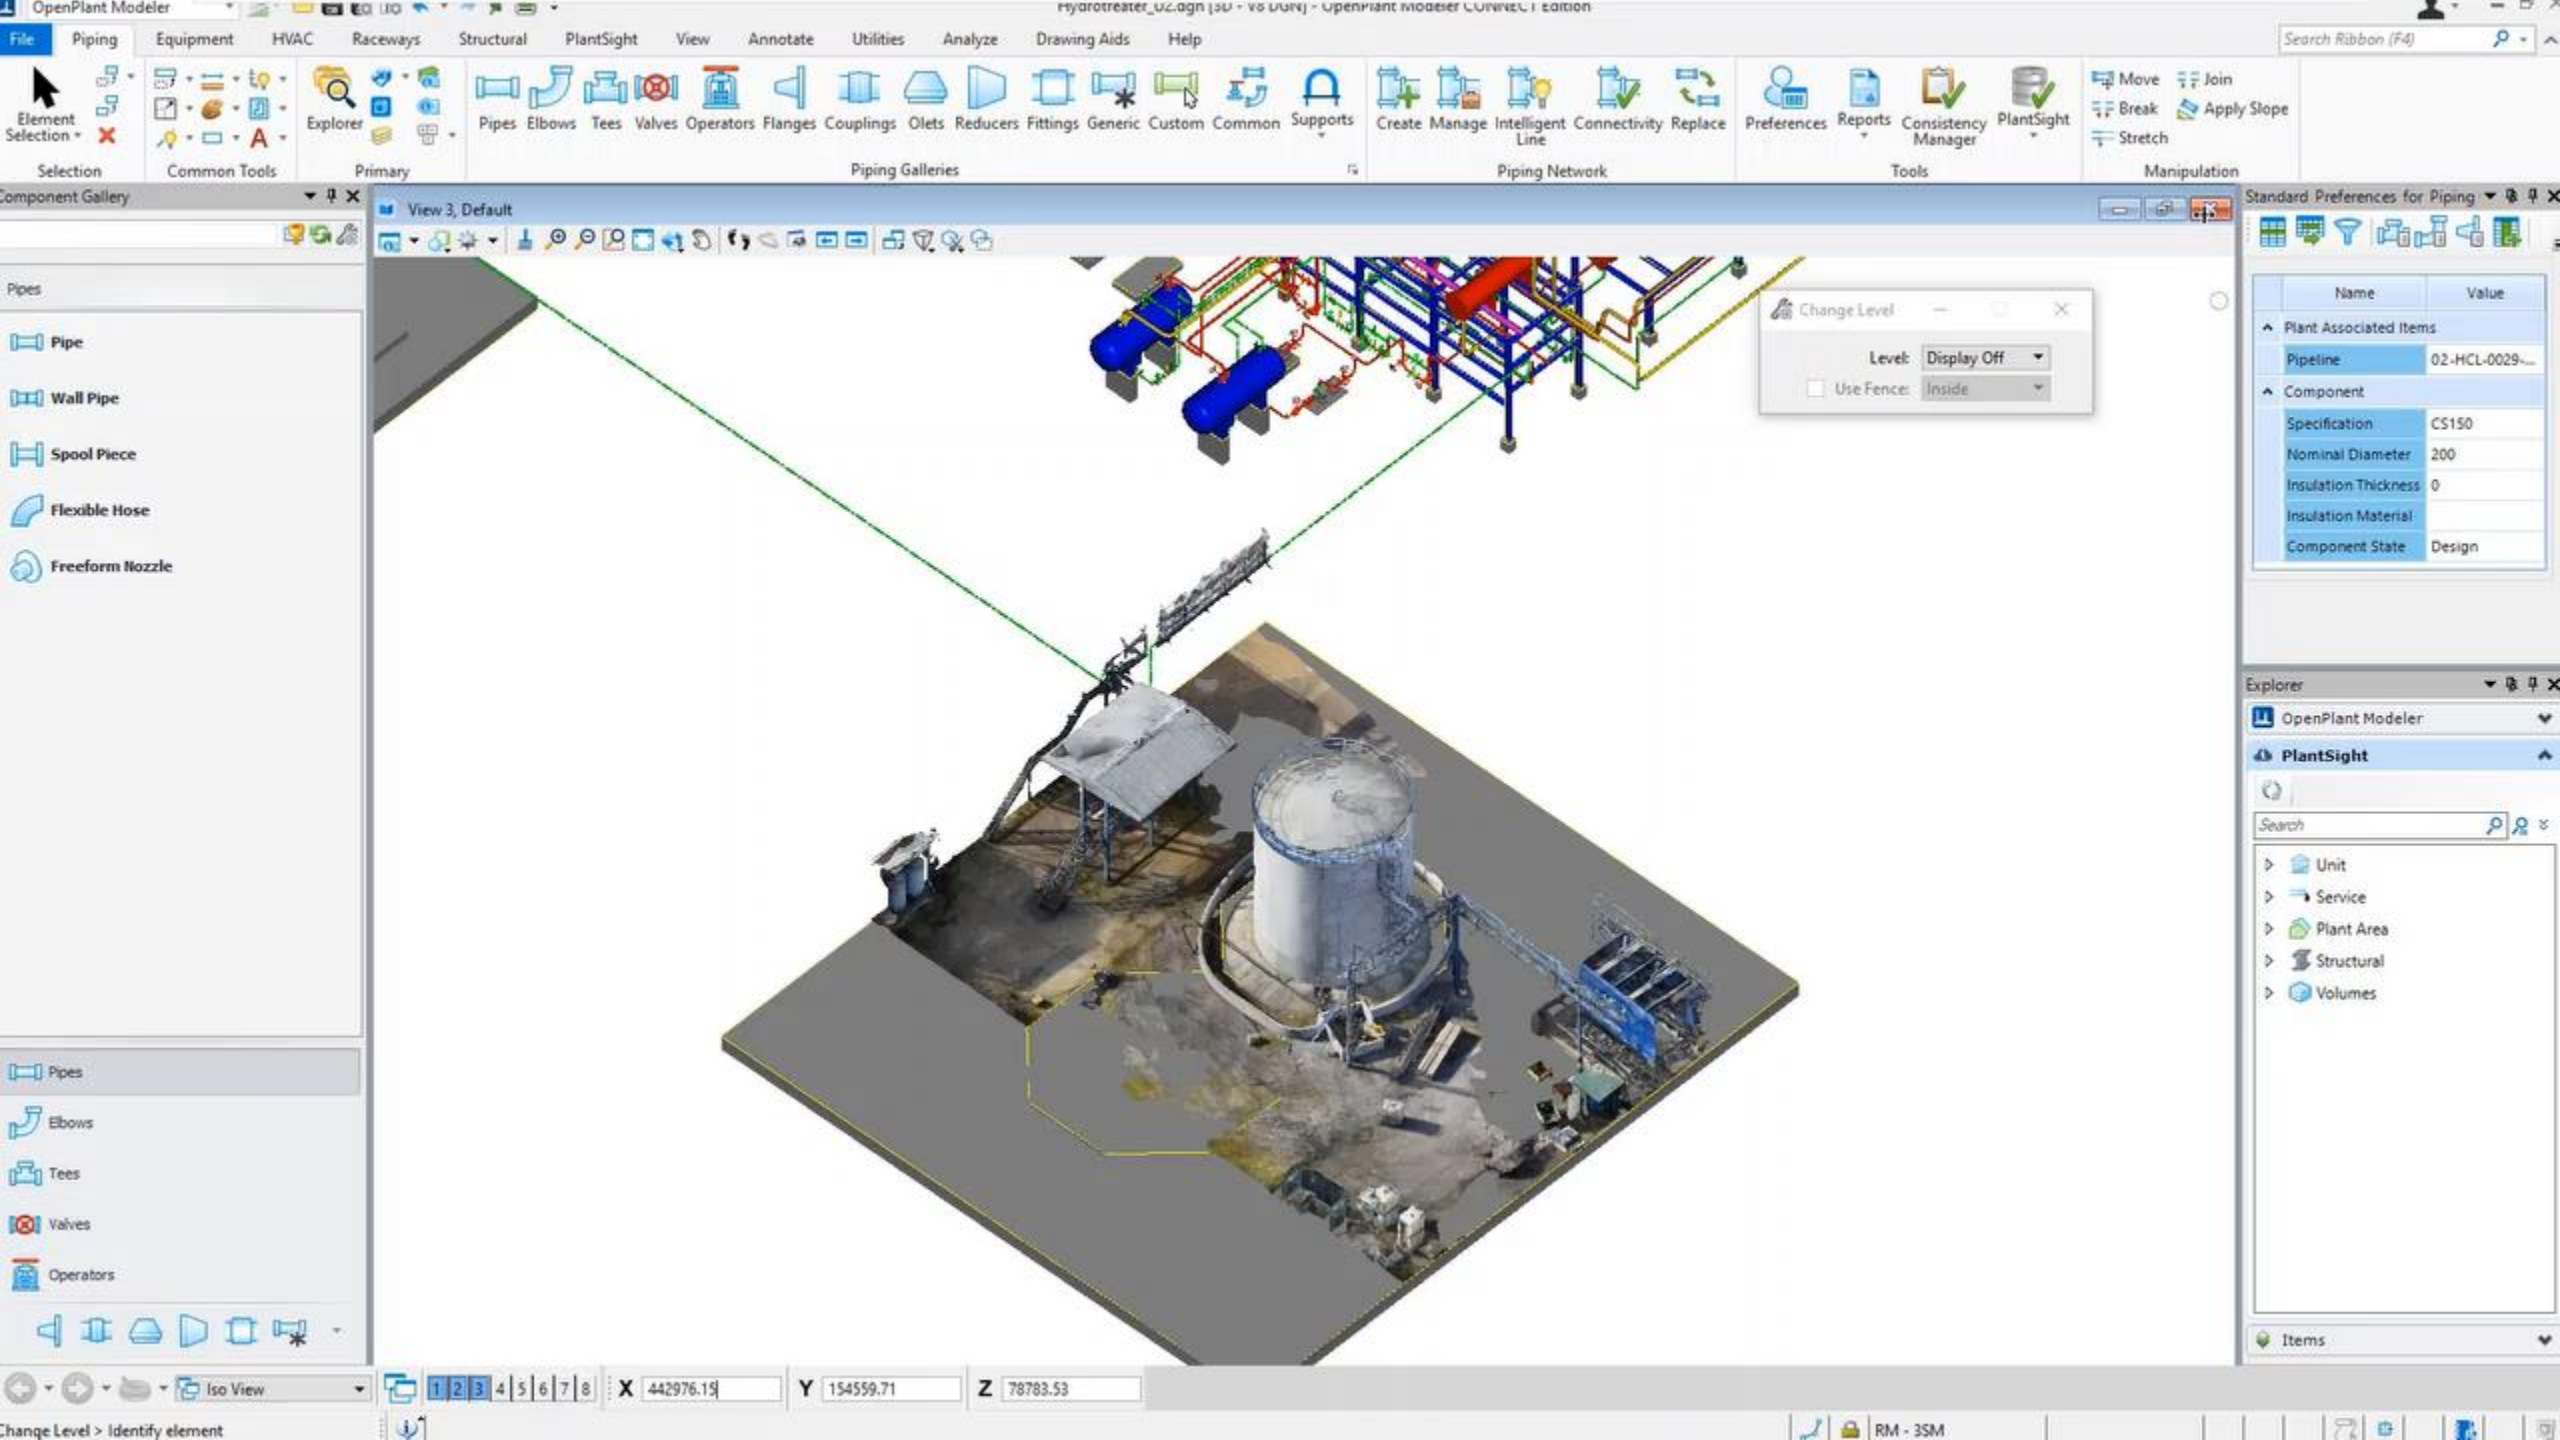

- Helps visualize as built against design and existing conditions in brownfield projects
- Various sources of data input and help create Digital Twins including design data from OpenPlant (3D Models, PIDs etc.), Reality Models, ERP and process data
- Integration: Once all this information is related it is easy for instance to cross probe reality data in design session

Reality Modeling – Existing Conditions

- Context Capture
 - Use photographs to accurately model existing conditions
- Point Clouds
 - Attach cloud to design session
 - Clipping tools
- LumenRT
 - Realistic walkthroughs
 - Models for review\client meetings

Extensibility with iModel.js

- ✓ Set of TypeScript API libraries
- ✓ Building web, desktop or mobile applications that interacts with iModelHub
- ✓ Support connected, as well as offline, workflows
- ✓ Frontend and backend libraries
- ✓ Open source for general access

 - Consolidated multi-discipline modeling and management
 - Highly performant and supports offline mode
- Data Consistency
 - Consistent data available anytime, anywhere
- Cloud-based services
 - Data management
 - Visualizations
 - Extensibility
- Aligning engineering and operations

The background image shows a complex industrial facility, likely a refinery or chemical plant, at night. The scene is dominated by tall distillation columns, a dense network of pipes, and multiple levels of walkways. Several bright blue spotlights illuminate the structures, creating a high-contrast, futuristic atmosphere. A large, semi-transparent blue arrow points downwards from the top center of the frame, bisecting the image diagonally. The left side of the image is faded into a light blue gradient.

Thank you
