

WWW.BENTLEY.COM

Working with Laser Scanning Survey Data

Chris Angus
Business Development Director – Bentley Professional Services

WWW.BENTLEY.COM

Topics to Cover

- Introduction to Scanning Technology
- The issues that relate to the survey of the operational railway
- Some of the current business drivers
- Review of a number of case studies by scanning and data acquisition organisations
- A look into the future for track measuring and scanning
- Discussion and Question and Answer

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

A BIG thank you to the following organisations

ABA Surveying

WWW.BENTLEY.COM

Where did the idea for Scanning come from ?

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

ABA

3-d scanning – What is it ?

Most of us are familiar with digital photography and the image being made up of pixels

Pixels >>>> Image

Bentley 2005 Nordic Civil User Conference

BENTLEY

WWW.BENTLEY.COM

ABA

3-d scanning – What is it ?

In scanning jargon the Point is analogous to the pixel – with one important difference
It has a very precisely measured 3d position in space

Technical definition

a Point !

Bentley 2005 Nordic Civil User Conference

BENTLEY

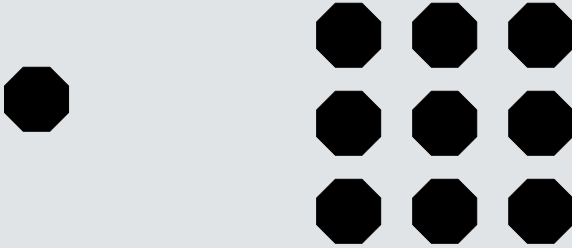

WWW.BENTLEY.COM

ABA

3-d scanning – What is it ?

*Just as lots of Pixels make a photograph
Lots of points make up a Point Cloud*

Point >>>> Point Cloud

BENTLEY

Bentley 2005 Nordic Civil User Conference

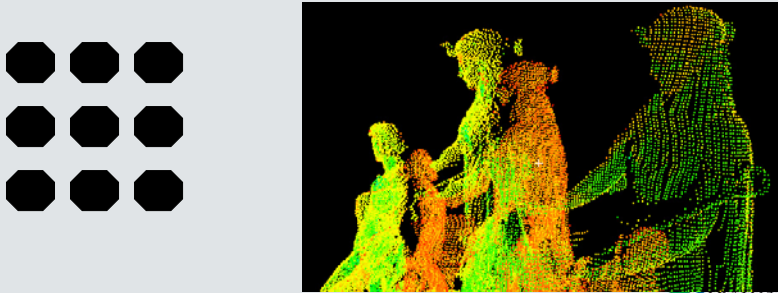

WWW.BENTLEY.COM

ABA

3-d scanning – What is it ?

We can control the spacing of the points to mimic the resolution of the photograph and the point cloud becomes identifiable

Points >>>> Point Cloud

BENTLEY

Bentley 2005 Nordic Civil User Conference

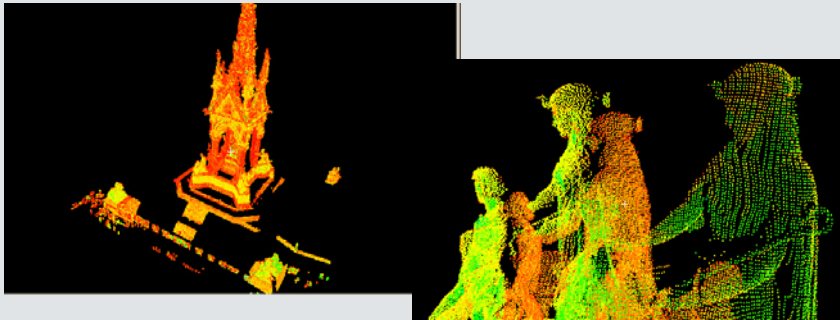

WWW.BENTLEY.COM

ABA

3-d scanning – What is it ?

- and one or more Point Clouds can build up the Scanworld

Scan World <<<<< Point Clouds

BENTLEY

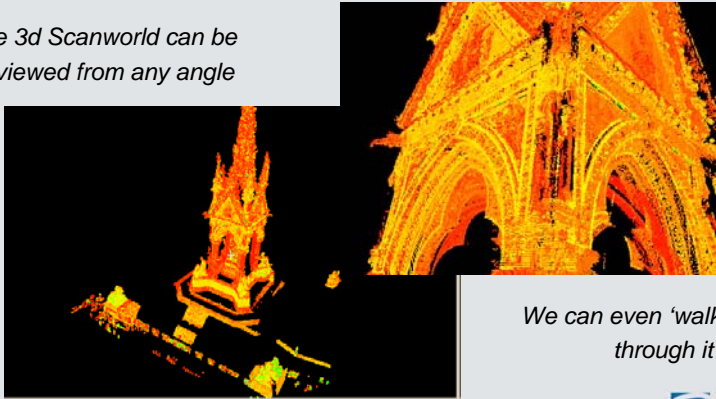

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

ABA

3-d scanning – What is it ?

The 3d Scanworld can be viewed from any angle

We can even 'walk' through it

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

ABA

3-d scanning – What is it ?

When we combine a scanworld with a photograph we add dimensional integrity.

We obtain both condition and the ability to measure to any point in the scan for clearances or deformation purposes

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

The first Hardware

- **Cyrax® 2500** laser scanning system
- 320 in use worldwide, several thousand successful projects
- 55 in use in Europe, 17 in UK
- Best of class for range/ accuracy characteristics

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

Configuration

Laser Scanner

Laptop Computer & Software

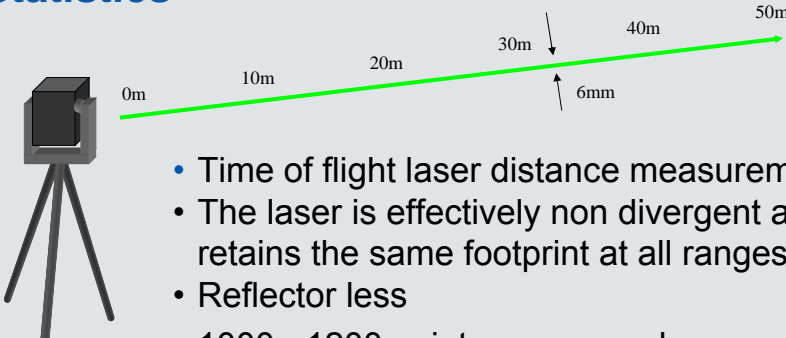

Electronics & Power Supply

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

Statistics

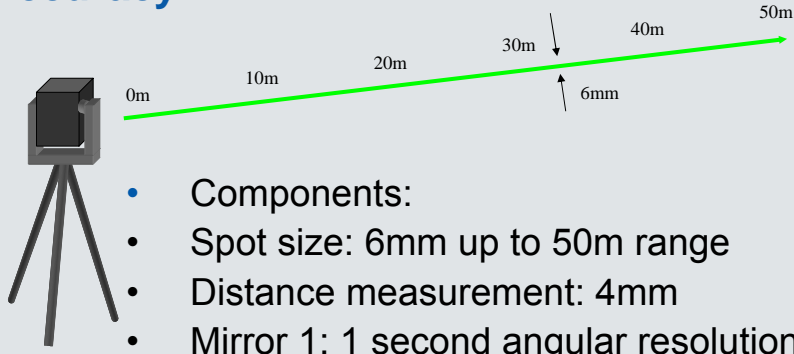

- Time of flight laser distance measurement
- The laser is effectively non divergent and retains the same footprint at all ranges
- Reflector less
- 1000 - 1200 points per second
- 250m maximum range
- 40° x 40° aperture

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

Accuracy ?

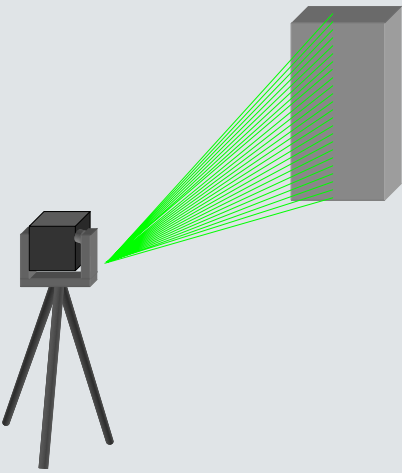

- Components:
- Spot size: 6mm up to 50m range
- Distance measurement: 4mm
- Mirror 1: 1 second angular resolution
- Mirror 2: 1 second angular resolution
- Computer driven – we have complete control over the Point Cloud density

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

Scanning

- The movement of the beam is recorded by precise angular encoders
- The scan pattern is a series of vertical lines traversing from left to right
- Can capture 1.2mm grid at 50m
- Target fix to < 1mm
- Essential for accurate multiple scan registration

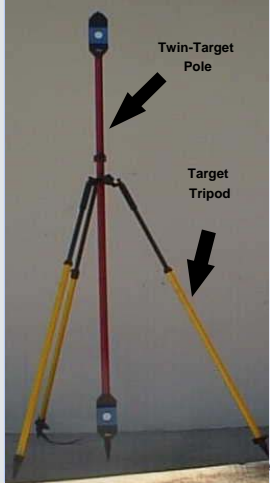

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

Registration

- Target based
- Cloud to Cloud
- Combination of two
- Verticality from target pole
- Change coordinate system in Cyclone

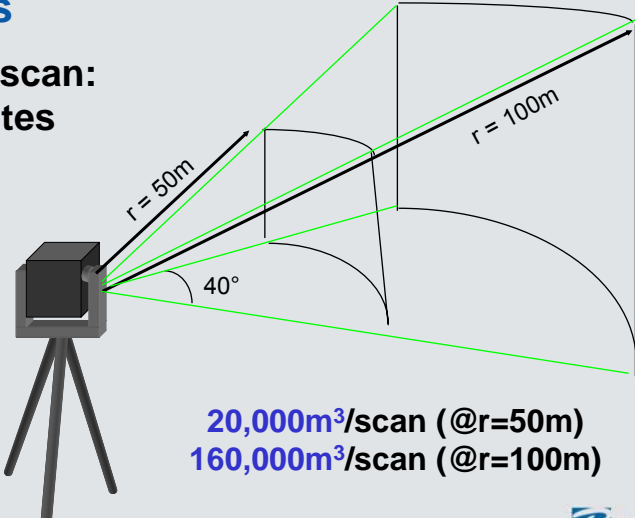

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

Volumes

**Typical scan:
10 minutes**

20,000m³/scan (@r=50m)
160,000m³/scan (@r=100m)

Bentley

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

ABA Surveying

The scanner is controlled through a laptop computer giving user selection of target area and resolutions etc

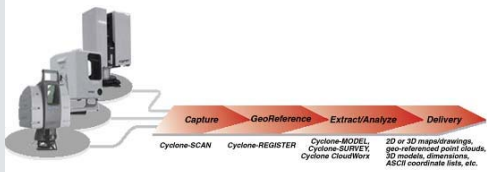

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

The Software

- CYCLONE 5.2 3D data visualisation, modelling and analysis software
 - More than 600 installed licenses worldwide
- CloudWorx 3.1 for MicroStation and AutoCAD
 - Provides point cloud analysis within MicroStation ONLY available from Bentley
 - AutoCAD versions from Leica Geosystems
- CYCLONE Viewer 5.2.1
 - Enables all professionals to exploit 3D point clouds
 - Freeware available at http://www.leica-geosystems.com/hds/en/lgs_3490.htm

BENTLEY

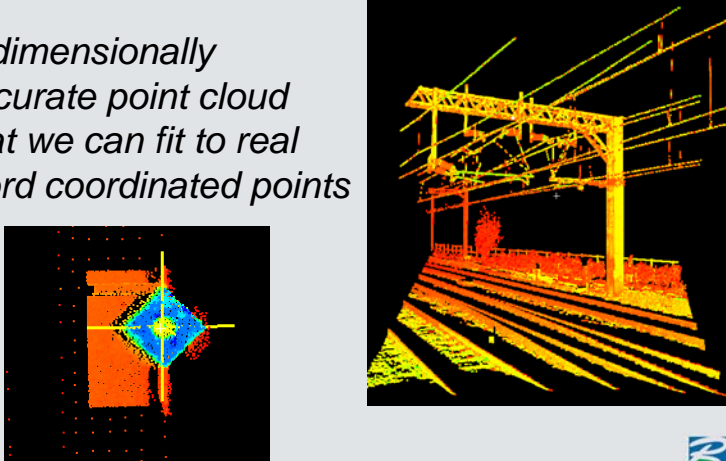

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

ABA

3-d scanning – What do we get ?

A dimensionally accurate point cloud that we can fit to real word coordinated points

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

ABA

3-d scanning - Vs - traditional

What are the alternatives ?

- **Total Stations**
 - Contact measurement to a prism or non-contact by intersection
- **Reflectorless Total Stations**
 - Non-contact measurement by manual pointing with an inbuilt laser EDM
- **Close range Photogrammetry**
 - Non-contact measurement using stereoscopic metric photography

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

ABA

3-d scanning - Vs - traditional

- **Total Station capture**
- Datasets captured by total stations are based on discrete points
- Discrete point datasets must be fully specified by the client and thoroughly understood by the field surveyor
- Any missed or faulty data will require a revisit by the surveyor

Optical

Point details	
Code	Spot elevation
Point	1216
Ant ht	(True) 6.840ft

GPS

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

ABA

3-d scanning - Vs - traditional

Close range photogrammetry

- Photogrammetric accuracy requires good stereoscopic geometry (two viewpoints), good photography and good control
- The data is extracted from the stereo model under controlled conditions
- Further visible data may be extracted at any time without needing more site visits
- A photograph is still the best record of condition and quality

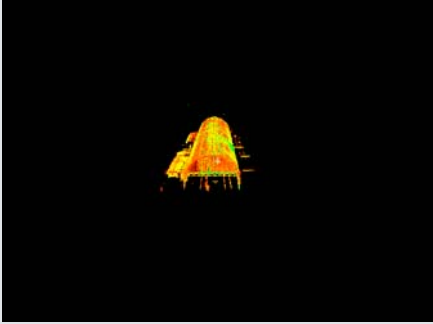

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

3-d scanning - Vs - traditional

Scan capture

- Point cloud density may be defined to suite the task
- Data capture is typically less than 15 minutes
- Discreet points can be extracted easily under controlled conditions
- Discreet points can be validated statistically
- Datasets can be analysed for deviation and deformation without further site visits
- Datasets can be joined easily

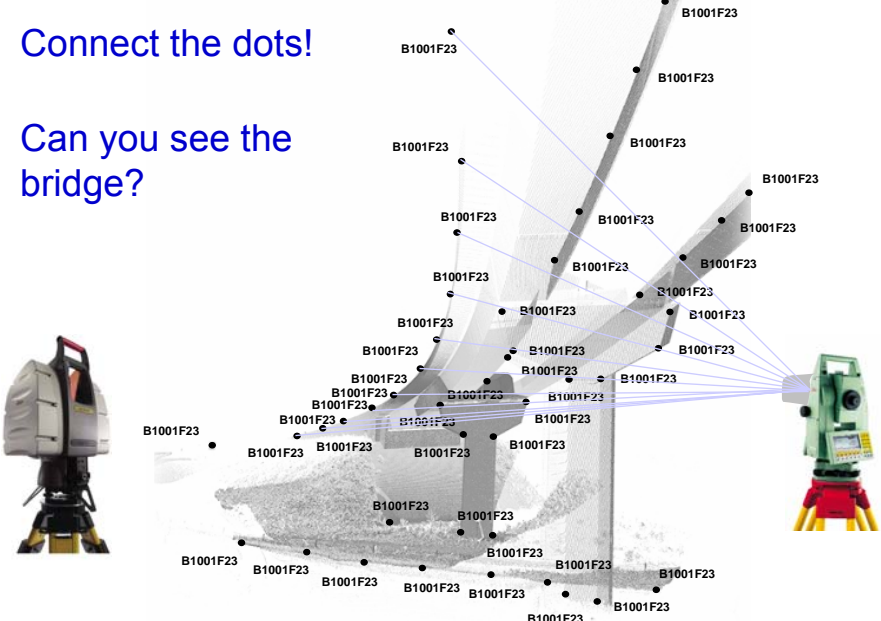

Flythrough of Kings Cross roof courtesy of **PCA**

Bentley 2005 Nordic Civil User Conference

Connect the dots!

Can you see the bridge?

WWW.BENTLEY.COM

Scantech
International Ltd

Surveying issues encountered by other consultants - their wish list

- ❖ **Safety** - Would like it improving
- ❖ **Programme** - Must minimise pre-engineering phase
- ❖ **Innovation** - Identify new technology that can add value in a cost effective manner
- ❖ **Interface** - Design Integration needed i.e. everyone working to common data
- ❖ **Inaccurate surveys & out of date information** - Eliminate as this results in re-work in both the design & construction phases

BENTLEY

Bentley 2005 Nordic Civil User Conference

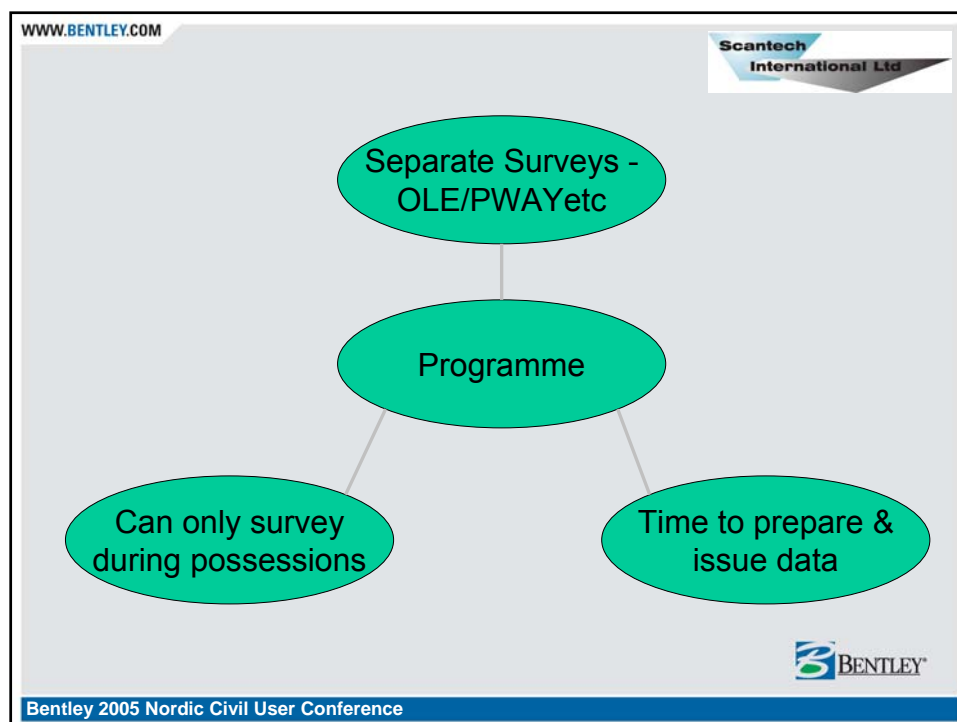

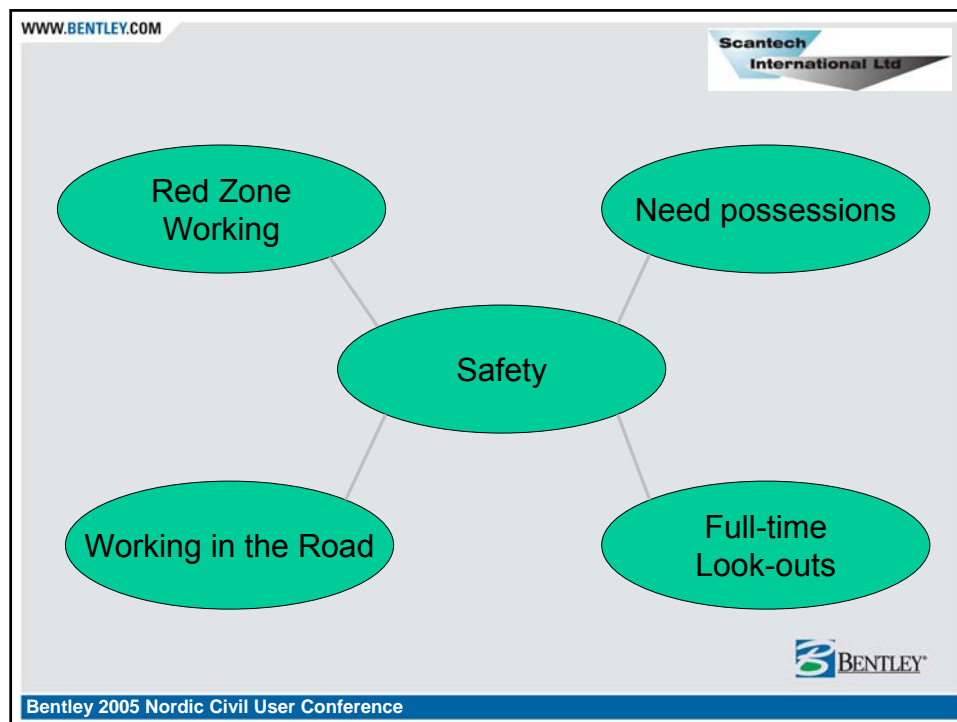

WWW.BENTLEY.COM

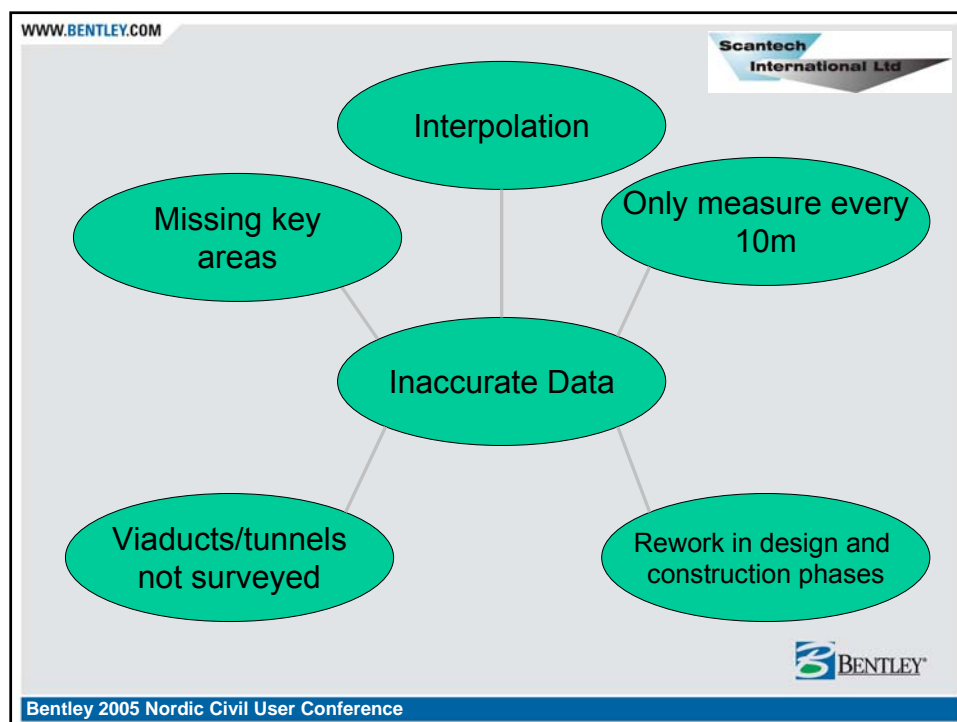

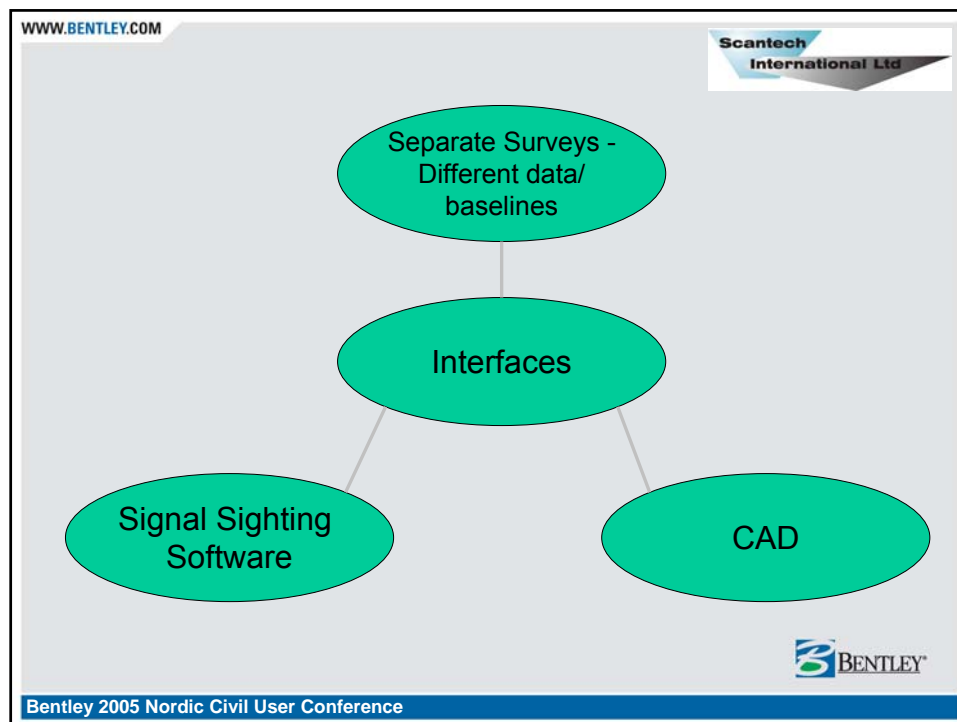

Scantech
International Ltd

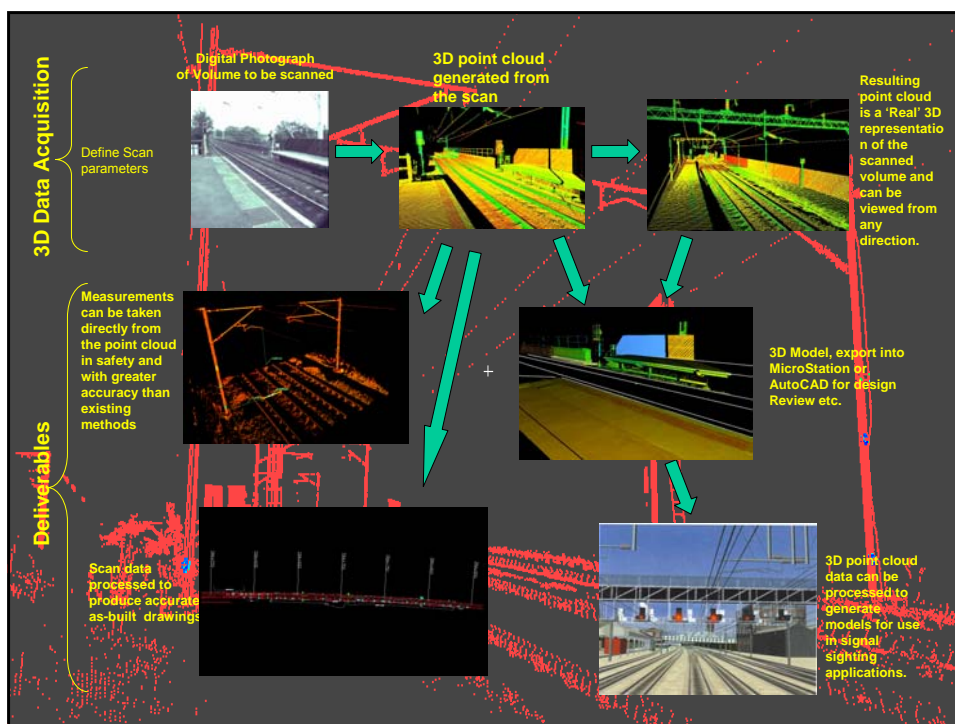

What are the real issues behind these headline problems ?

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

Scantech
International Ltd

Business Benefits

- ❖ **Safety** - Work in Green zone or off the road in safe location
- ❖ **Programme** - Captures all the information in one visit
- ❖ **Innovation** - It is new technology
- ❖ **Interface** - Common interface so everyone working to same data
- ❖ **Inaccurate surveys & out of date information** - Information accurate to 5mm

ABA Surveying

Project Example 3 Preston Brook Tunnel

The requirement:

- To survey the track, the OLE including structural steelwork and the tunnel profile in order to provide a positional database of all the assets within the tunnel.

BENTLEY

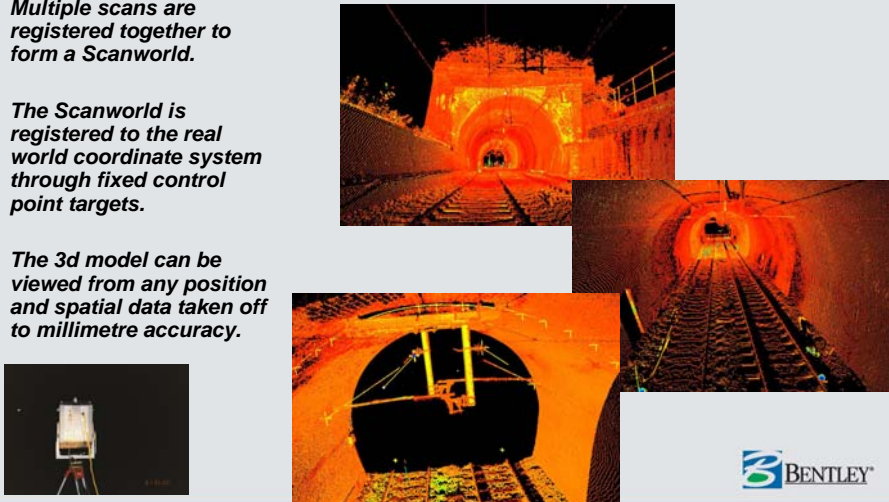

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

ABA Surveying

Sequential scanning of the tunnel

- Multiple scans are registered together to form a Scanworld.
- The Scanworld is registered to the real world coordinate system through fixed control point targets.
- The 3d model can be viewed from any position and spatial data taken off to millimetre accuracy.

Bentley 2005 Nordic Civil User Conference

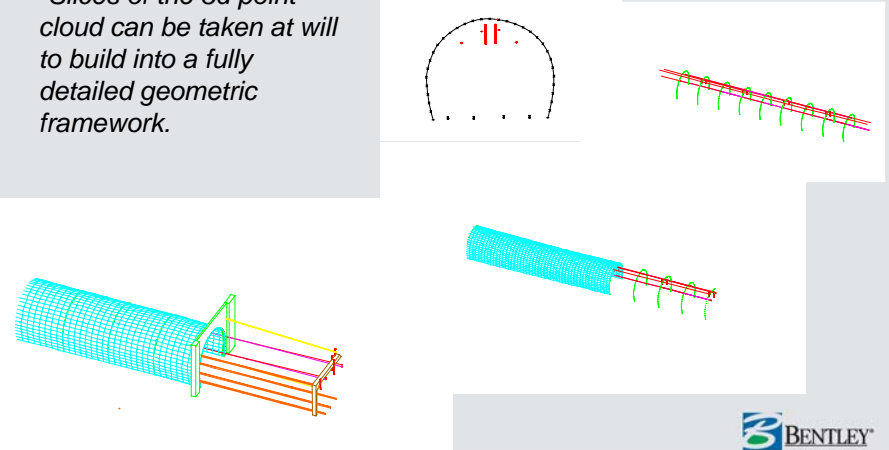

BENTLEY

WWW.BENTLEY.COM

ABA Surveying

Geometric data is abstracted

- Slices of the 3d point cloud can be taken at will to build into a fully detailed geometric framework.

Bentley 2005 Nordic Civil User Conference

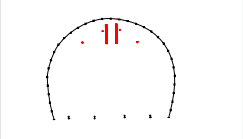

BENTLEY

WWW.BENTLEY.COM

ABA Surveying

Geospatial data is abstracted

- or spatial data can be extracted directly into a database format without manual transcription and to millimetre accuracy

ABA Surveying

Sometimes we find the unexpected

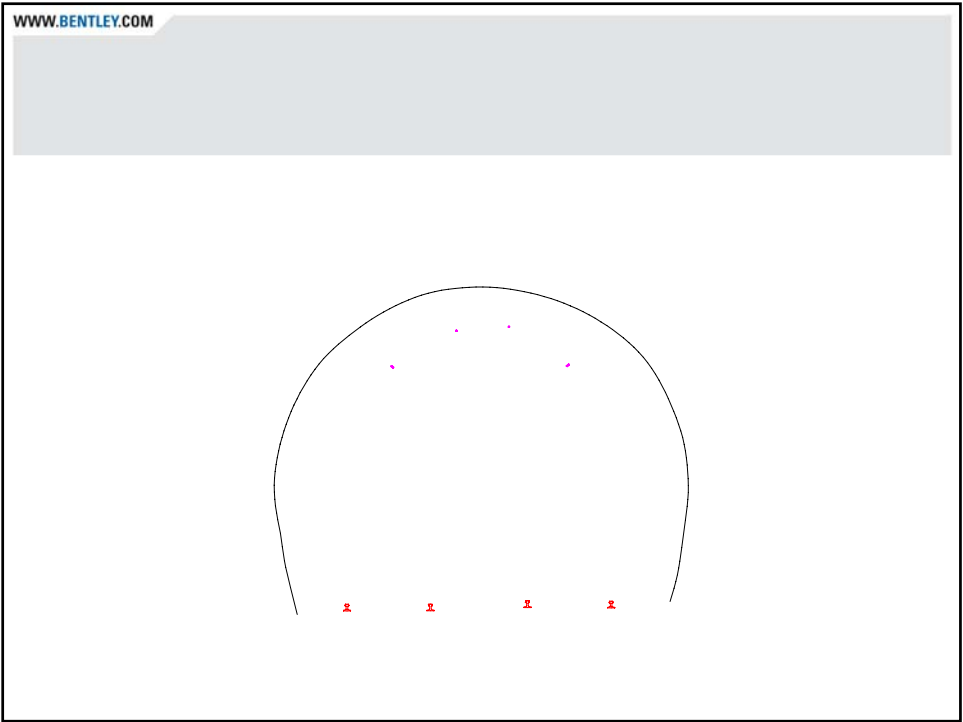

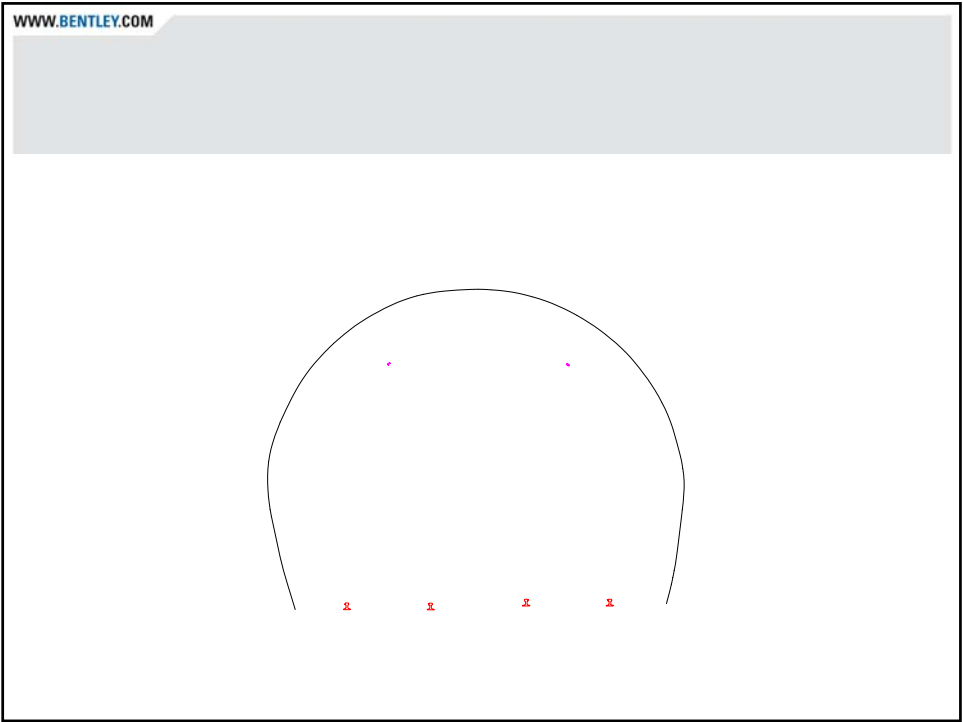

When we do - we have the ability to interrogate the dataset in as much detail as we wish without having to revisit the site.

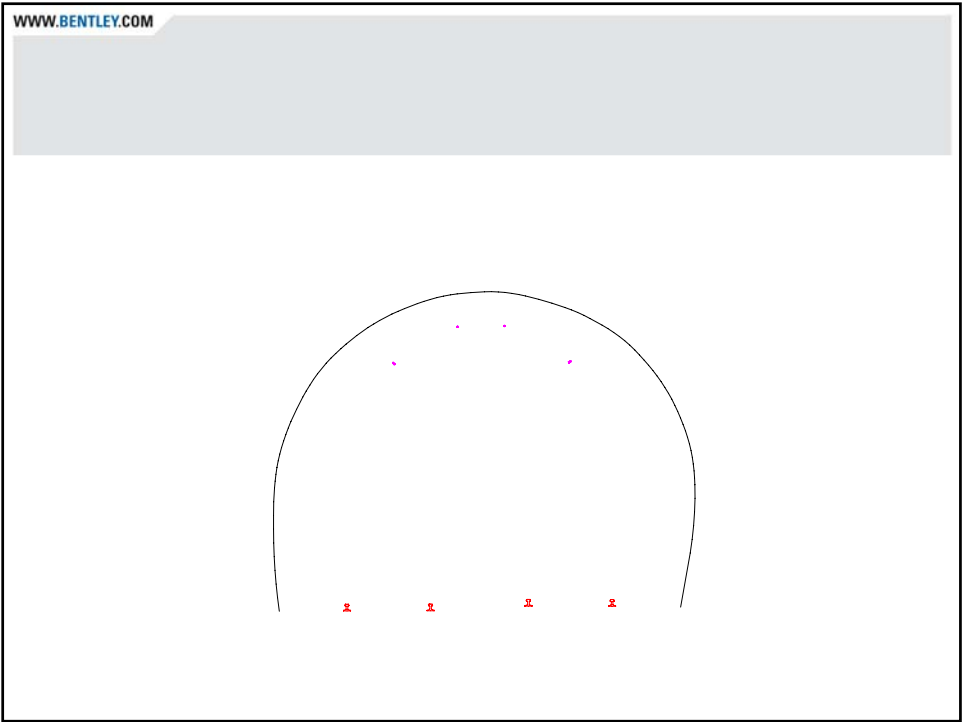

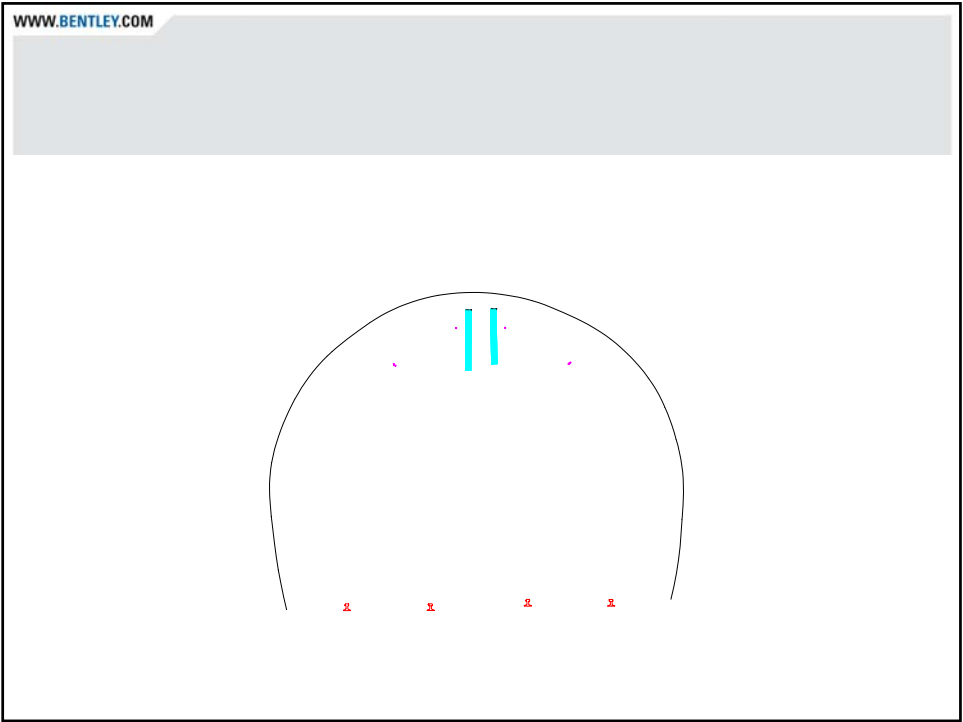

Watch the waist of the tunnel as we sequence through the dataset and you will see the tunnel lean from the left through to the right as we progress through.

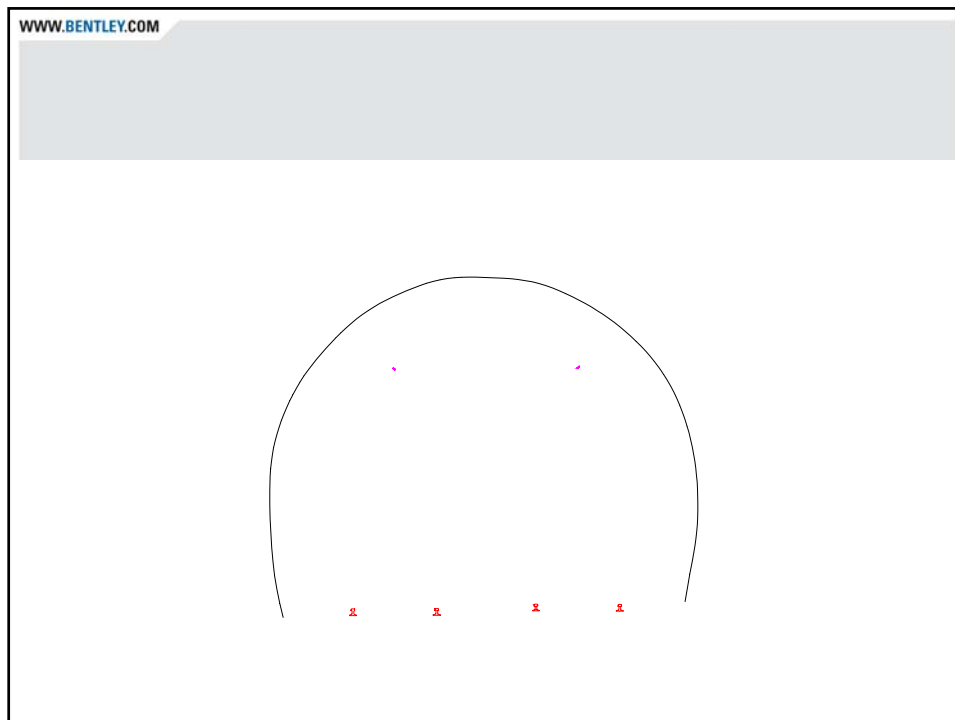

You will see that the roof has also compressed in places by as much as 250mm

BENTLEY

Bentley 2005 Nordic Civil User Conference

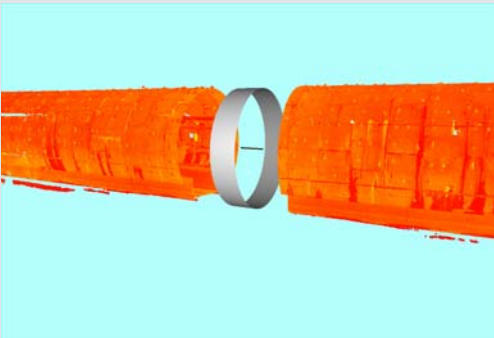

WWW.BENTLEY.COM

Project Example 4 CTRL OLE Bracket Placement Project

The requirement:

- To survey the tunnel lining for tunnel supporting brackets for the OLE components

Track trolley: on the move including gauge and cant values

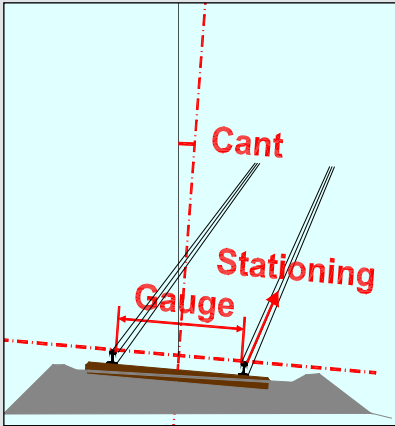

- Rugged, compact high precision aluminium frame track trolley
- delivered with calibration certificate
- integrated sensor for gauge, cant and stationing
- back-lit LCD display for system parameter control and visual sensor readings
- hosts radio link, battery pack and other accessories

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

Integrated sensors for gauge, cant and stationing measurement

- The trolley integrated sensors measure continuously the cant, gauge and stationing
- Values are recorded automatically in control software GRPwin
- Gauge measuring accuracy 0.3mm
- Cant measuring accuracy 0.5mm (on 1435mm base)
- Stationing resolution 2cm

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

PROFILER 100: precise measurement of obstacles

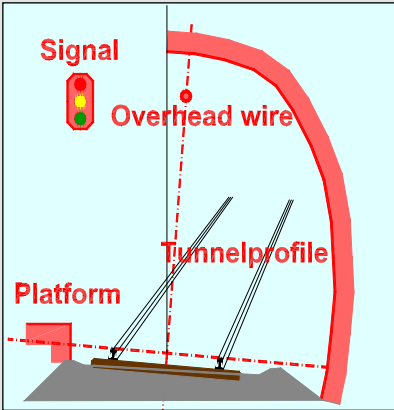

- ideal for tunnels, platform edges, overhead wire position
- fully motorized, 360° cross-section survey system
- automatic or manual control
- distance range 0.5m to 50m
- distance accuracy 1.5mm
- angular accuracy 66°cc
- measurement speed: up to 50pts./min.
- pre-selectable scanning modes
 - start and end angle
 - spacing

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

Integrated measurement of clearance profile

- Measurement of any obstacles with the integrated PROFILER 100
 - Automatic measurement of a profile
 - Manual measurement of individual points
- Direct measurement to thin objects (overhead wire) without the use of a target
- Online-Graphic on GRPwin software

New high speed or existing old lines for LEICA GRP3000

New high speed railway lines

- high precision track positioning
- Offset tables for track tamper guidance
- track axis, gauge, cant and clearance control
- quality control / final acceptance

Existing railway lines

- assessment of existing track geometry and clearance
- data for track axis optimisation
- track alignment control according to optimised project axis

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

GRP3000: Production performance

Production rate:

• typical system setup time -	15 min.
• track survey / hour -	1500m track / 200 axis points
• clearance cross-sections / hour	45 cross-sections with 50 pts.ea.
• typical battery power endurance	5 hours (with one set)
• manpower required	1 surveyor, 1 survey assistant
• accuracy of track geometry	< 2mm at 300m distance with TPS

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

GRP 5000: Laser Scanner LEICA HDS4500

- Highest scanning speed with up to 33 cross-section per second
- Each cross-section up to 20'000 points
- Maximum distance frequency 625'000 points per second
- Accuracy in cross-section 10mm
- Range 0.8m to 25.3m

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

GRP5000: track gauging trolley

- Integrated sensors for stationing and gauge measurement
 - Stationing accuracy 2cm
 - Gauge measurement accuracy 0.3mm
- Integrated power supply from rechargeable batteries
 - Approx 5 hrs of continuous operation
 - Exchangeable
- Adaptable to different nominal gauges from 1.000m to 1.670m

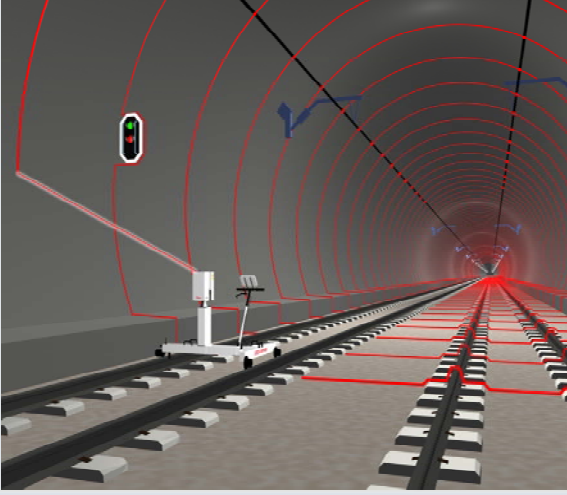

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

GRP5000: Measuring principle

- While the instrument is scanning the cross-sections the operator pushes the trolley with a speed of between 1-4 km/hour
- Scan-lines at a very dense distance are measured

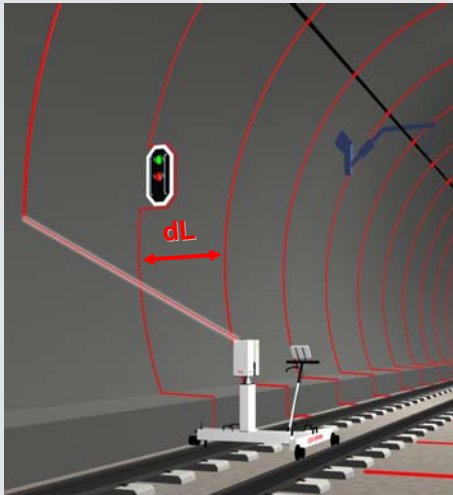

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

GRP5000: Density of measurement

Rotation frequency 33Hz

Travelling speed	Distance dL between profiles
0.25 m/sec (0.9 km/h)	7mm
0.5 m/sec (1.8km/h)	15mm
1.0m/sec (3.6 km/h)	30mm

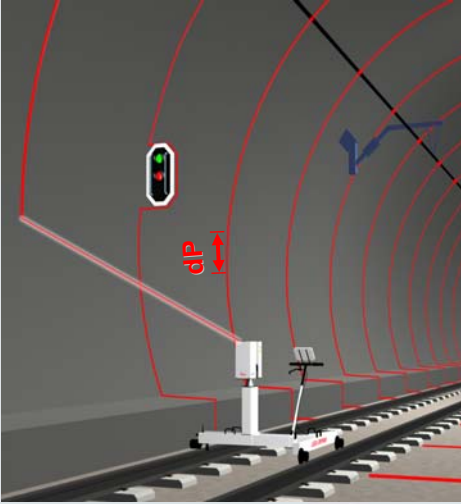

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

GRP5000: Density of measurement

Rotation frequency 33Hz

Measured distance	Distance dP between two profile points (with 10'000 points per profile)
5 m	3 mm
10 m	6mm
15m	9mm

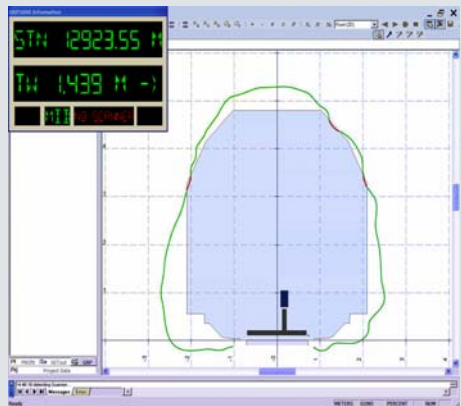

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

LEICA GRP5000: Measurement control

- Preparation
- The user can define the clearance profile to be used
- The user specifies the reference stationing
- The user sets the measurement parameters
- Measurement
- The graphic shows the actual cross-section measurement
- A comparison is made in real-time with the clearance profile
- The measured data is stored to file according to storage mode

Bentley 2005 Nordic Civil User Conference

BENTLEY

WWW.BENTLEY.COM

LEICA GRP5000: 3 different storage modes

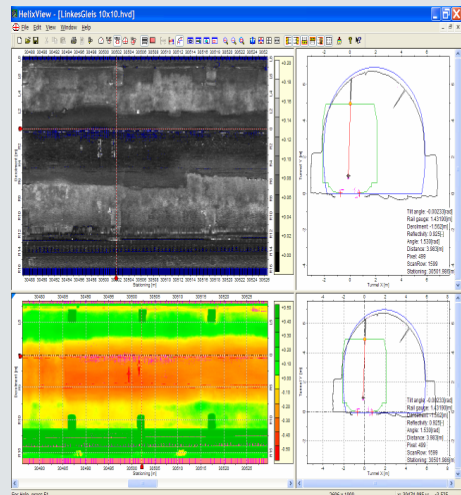

- Three different storage modes:
 - Continuous storage of all measurements (continuous operation)
 - All the measured points are stored continuously to the file with greyscale and geometrical information
 - Interval storage (continuous operation)
 - The user sets the storage interval (e.g. 5 meters) and the integration specifications (e.g. ± 2.5 meters)
 - One cross-section is stored in the specified storage interval as minimum and maximum profile (only geometrical information)
 - Snap-shot storage
 - The user “searches” the interesting points / narrow spots with the help of the on-line graphic
 - Whenever the cross-section is required to measure, he stores that measurement to file (only geometrical information)

Bentley 2005 Nordic Civil User Conference

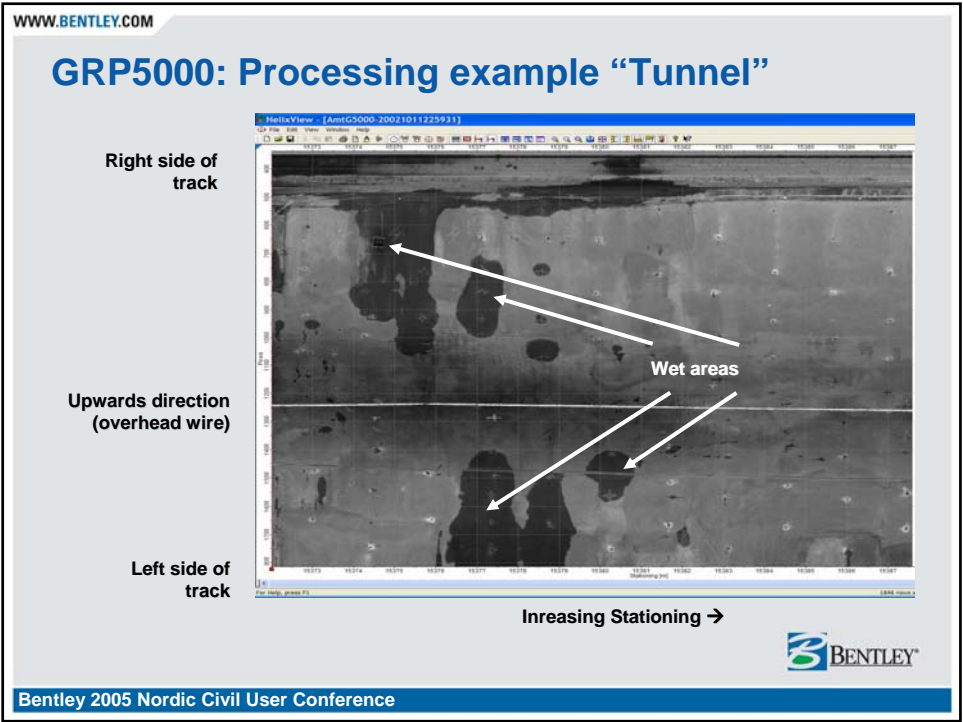

WWW.BENTLEY.COM

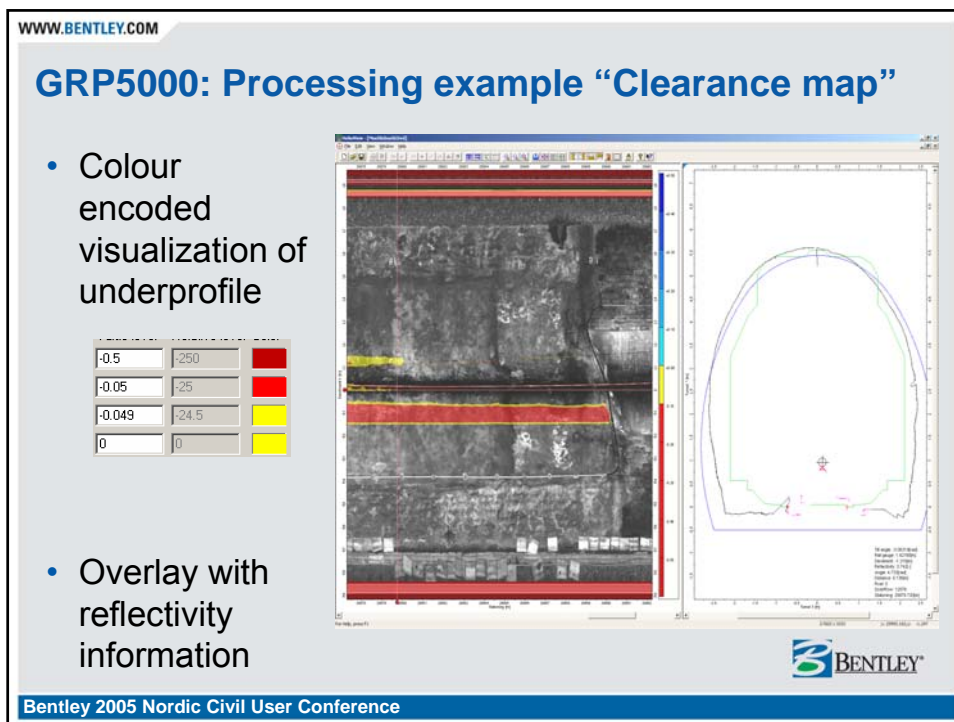

LEICA GRP5000: Processing procedure

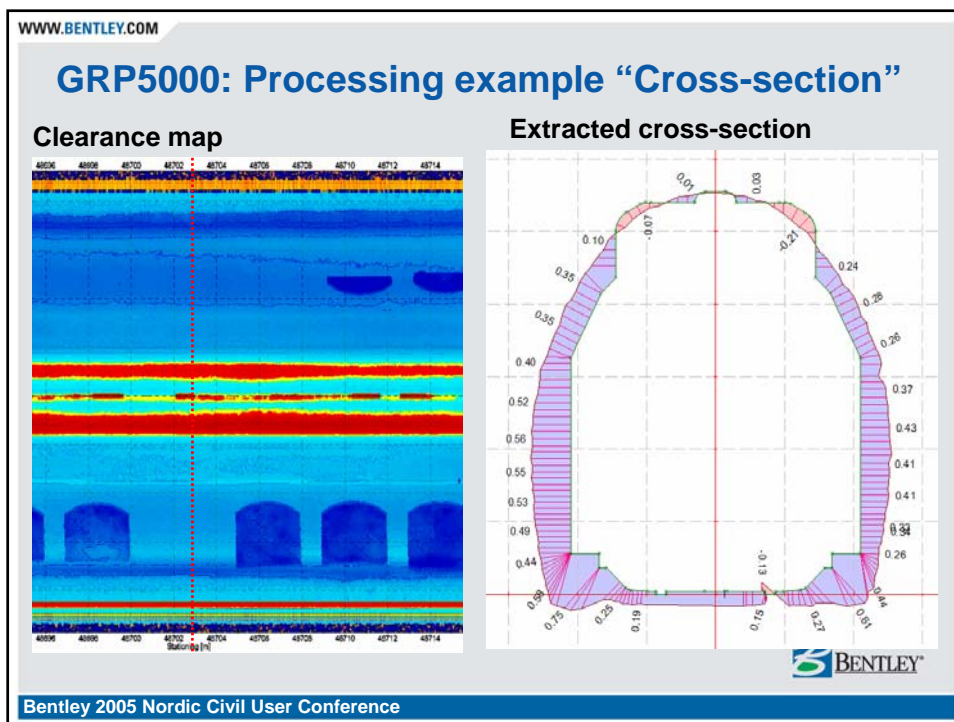

- Data is normalized to
 - projection system (cylinder, tunnel profile, plan-view, others)
 - Correct stationing
- Reflectivity information is used for greyscale / false colour image
- User selects viewing window
- User select specific location (stationing for cross-section)

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

LEICA GRP5000: Summary

- Productivity 1-4km / hr
- Point density 5mm to 10mm
- Greyscale information
- Geometric information
- Portable and light weight
- Fully battery operated
- Tailored measurement and processing software
- Simple handling

2004 HIGH-DEFINITION SURVEYING SYSTEMS

The value added to deliverable products has encouraged investment in a new generation of 3D Scanners.

HDS3000

HDS4500

Bentley 2005 Nordic Civil User Conference

BENTLEY

WWW.BENTLEY.COM

ABA SURVEYING

IN 2004 ABA SURVEYING DEVELOPED KINEMATIC 3D SCANNING

The system GRP5000 combines the HDS4500 and Leica's GRP Rail Trolley.

- The Scanner is mounted on the Trolley and fixed perpendicular to the Track.
- The Beam rotates at up to 33 Scans per second and records up to 20 000 Points per revolution.
- Pushing the Trolley along the Track at circa 1km/hr results in a progression along the track of 8mm between each scan ensuring all detail is picked up.
- The System also records the track chainage and cant, gauge and a time stamp at very close intervals.

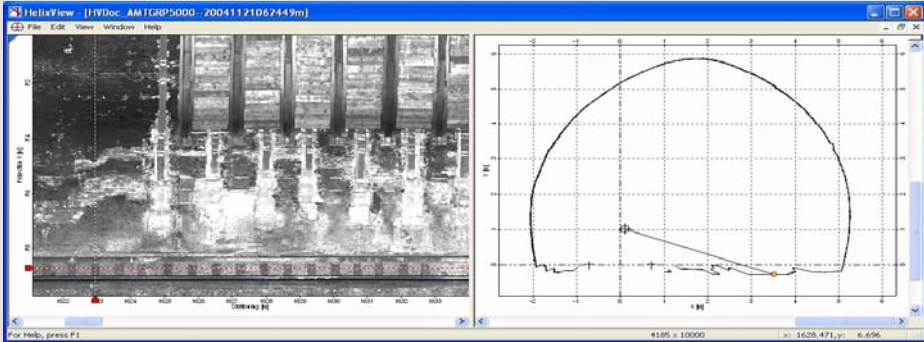

Bentley 2005 Nordic Civil User Conference

BENTLEY

WWW.BENTLEY.COM

ABA SURVEYING

Even unlit tunnels can hide no secrets

Bentley 2005 Nordic Civil User Conference

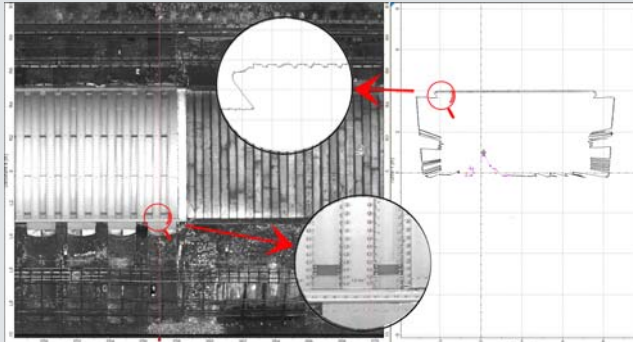

WWW.BENTLEY.COM

ABA SURVEYING

KINEMATIC 3D SCANNING

Massive amounts of Storage Capacity are required. At 1.5 MB of Data is recorded every second, approximately 500 MB of raw Data per 100m is stored.

Software allows the Scan to be viewed with a de-rolled Projection at almost Photo resolution and Profiles can be extracted at any Chainage.

Getting it Right

BENTLEY

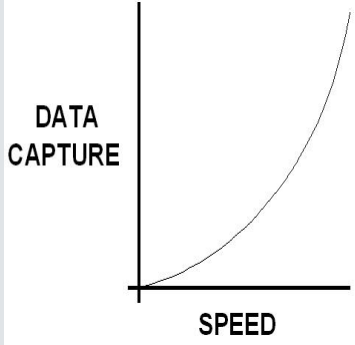

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

ABA SURVEYING

Onwards and Upwards
EXPONENTIAL PROGRESS

- 30 years ago it took a Surveyor plus an Assistant and a Draughtsman to produce 150 Points per day.
- 15 years ago it took a Surveyor plus an Assistant to produce 1000 Points per day.
- 5 years ago it took a Surveyor on their own to produce 15 million Points per day.
- Today a Surveyor on their own can produce 10 Billion Points per day!**

BENTLEY

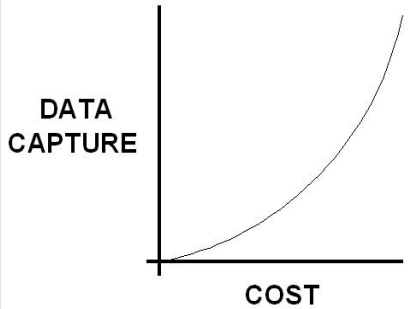

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

ABA SURVEYING

*Onwards and Upwards
THE CLIENT'S PERCEPTION*

- The Cost stays the same or reduces.
- Why pay more for the Supplier to use state of the art equipment?
- Doesn't this just make the work much more expensive?

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

ABA SURVEYING

*Onwards and Upwards
THE SURVEYORS ROLE HAS CHANGED*

The role of the Surveyor has shifted from a Survey and Setting-Out Engineer to an Information Technology Provider.

- The key now is to provide Solutions not just Data.
- A survey is no longer just a mapping dataset.
- A survey is an Asset Data Base – presenting Data in a meaningful way.
- Information Rich Data Set.
- Multi-discipline - the ability to blanket topic with dimensional information

BENTLEY

Bentley 2005 Nordic Civil User Conference

WWW.BENTLEY.COM

ABA SURVEYING

CLIENT-SPECIFIC SURVEYS

- Traditional survey datasets are based on Discreet Point surveying.
- Discreet Point Datasets must be fully specified by the Client and thoroughly understood by the Field Surveyor.
- Any missing or faulty Data or a change in scope of work by the Client requires another site visit by the Surveyor.
- During the life time of a Project some areas will often be re-surveyed many times to suit the particular needs of different Specialists.

```

graph LR
    PW[Permanent Way] --> SS1[Specialised Survey]
    S[Structures] --> SS2[Specialised Survey]
